THE ELECTROMEDICAL EQUIPMENT DESCRIBED IN THIS MANUAL REFERS TO THE **OWANDY-RX PRO** MEDICAL DEVICE.

"OWANDY RADIOLOGY" RESERVES THE RIGHT TO MODIFY THE PRODUCT AND ALL THE MANUALS WITHOUT PRIOR NOTICE.

IT IS PROHIBITED TO MODIFY, COPY, REPRODUCE, DISPLAY, SHARE, DISCLOSE AND PUBLISH THIS MANUAL AND ALL OTHER DOCUMENTS REFERRING TO **OWANDY-RX PRO** IN ANY FORM WITHOUT PRIOR WRITTEN CONSENT BY OWANDY RADIOLOGY

THIS MANUAL MUST ALWAYS BE KEPT NEAR THE MEDICAL DEVICE FOR FUTURE REFERENCE.

"OWANDY RADIOLOGY" SHALL NOT BE HELD LIABLE FOR MISUSE OF THE INFORMATION PROVIDED BY THIS MANUAL.

CONTENTS

1 INTRODUCTION

1.1. PRELIMINARY INFORMATIONS

Before starting with the use of the "Owandy-RX PRO" x-ray system, it is mandatory to carefully read and follow the instructions contained herein in order to obtain the best performance and assure the safety of the patient, operator, device and the environment. Always pay close attention to the messages when operating the system.

CAUTION
WARNING
PLEASE NOTE

LEGEND

⚠ CAUTION

The word CAUTION identifies those occurrences which might compromise the operator's personal safety or cause injuries to people.

WARNING

The word WARNING identifies those occurrences which might compromise the x-ray system's performance.

PLEASE NOTE

PLEASE NOTE serves to give special indications to facilitate maintenance or make important information clearer.

PROHIBITION

PROHIBITION The word prohibition identifies those actions that must be avoided because they might compromise the operator's personal safety or cause injuries to people.

1.2. INFORMATIONS FOR THE INSTALLER

⚠ CAUTION - ! WARNING

The installer is responsible for the installation, with regards to the system safety and operation.

The Owandy-RX PRO is an X-ray equipment intended to be used for dental intra-oral x-ray imaging.
For a safe and reliable installation of the Owandy-RX PRO radiographic system, together with the strict following of the instructions and recommendations contained in the accompanying documents and provided by the manufacturer, it is further recommended to:

- Check that the rated voltage mentioned in the rating plates matches the line voltage.
- Install the radiographic system according to the procedures described in this manual and in compliance with local rules and laws of the place of installation.
- Provide the operator with any information regarding the use of the radiographic system according to what stated in the accompanying documents according to its intended use.
- Certify the work done by a "declaration of conformity".

This manual has been written and published under the supervision of Owandy Radiology. It contains all the latest descriptions and features of the product. Although every effort is made to produce up-to-date and multi-language documentation (since each accompanying document is translated in different languages), this publication should not be regarded as an infallible guide to current specifications.
The information in this manual is periodically updated; any amendment will be included in subsequent publications without prior notice by Owandy Radiology.
Contact your dealer to request the latest version of the manual.
In the event of errors, please inform Owandy Radiology promptly.

⚠ CAUTION - ! WARNING

This manual describes how to install and set the Owandy-RX PRO x-ray system.
The installer must read and understand the manual before install and set the medical device.
This manual must be always kept as a reference document and it is mandatory to comply with the instructions supplied with it.
Before install the device, it is essential to carefully read the instructions, CAUTION and WARNING messages listed in the paragraph relevant to the safety warnings.

⚠ CAUTION - ! WARNING

This manual does not include all the recommendations and obligations concerning installation and use of ionising radiation sources, since they differ from country to country.
Therefore, only the most common are listed
Installers must refer to the laws in force in their country to meet all legal requirements.

PLEASE NOTE

For installation in USA, a report of assembly (Form FDA 2579) must be filled out to certify that the medical equipment was assembled according to the instructions provided by the manufacturer, and meets the requirements of the applicable Federal standards contained in 21 CFR 1020.30 through 1020.33.
Reports must be filed with FDA's Center for Devices and Radiological Health (CDRH) within 15 days of completion of the assembly. The report must be filled in according to the methods provided in:
http://www.fda.gov/ForIndustry/FDAeSubmitter/ucm107879.htm
(remember to check the updated web address since this may change over time)

1.3. WARRANTY CONDITIONS

Inappropriate use or any arbitrary tampering with, exempt "Owandy Radiology", as manufacturer of the "Owandy-RX PRO" x-ray system, from any service under warranty or from any other liability.

The warranty is valid only if the following precautions are taken, please refer also to the warranty conditions:

- **Any repair, modification, adjustment, or any kind of technical intervention must be performed only by Owandy Radiology. or by a qualified authorized representative**
- The installation must be made by professionally qualified technicians according to the regulations in force.
- The system must be installed and used in compliance with the instructions given in this operator's manual and in its associated documentation.
- The device shall be used in compliance with the purposes and applications for which it is designed.
- The power supply must be adequate to supply the required power indicated in the data contained in the labels of the device.
- **In order to safeguard your warranty rights, read carefully, fill and sign the Warranty Document provided by the seller, immediately after the installation is completed, together with the installer.**
- The system must be checked completely at least each 12 months by professionally qualified technicians according to the regulations in force. Use the manuals provided with the device **Owandy-RX PRO** for reference.
- Owandy Radiology. refuse all responsibility due to any damage coming from persons or things in consequence of non-observance of all prescriptions contained in all the manuals provided with the **Owandy-RX PRO** device.
- In case of repair, only original spare parts of the manufacturer of the **Owandy-RX PRO** must be used.

⚠ CAUTION

Disregarding the above mentioned rules and all the indications provided by the manufacturer in the documentation, or successively in written paper or electronic format, will cause the total losing of the warranty of the product and the manufacturer will be discharged from any obligation, including consequential damages, direct or indirect that may derive to people, things or environment. Furthermore, the facility representative, customer or employees of the facility, will be liable for any damage and/or incident and/or degeneration of the health status of a patient, operator, involved people and the surrounding environment.

This also will have the result in service charges for non-warranty technical assistance.

1.4. TRANSPORT CONDITIONS

The "Owandy-RX PRO" x-ray system travels at the receiver's own risk.

All claims for damages or mishaps regarding the shipment must be pointed out in the presence of the shipping agent. In case of actual or suspected damages, the receiver shall indicate the proper reserves on the way-bill or on the consignment note.

1.5. SAFETY WARNINGS

A few safety recommendations are listed here below which must be followed when using the "**Owandy-RX PRO**" x-ray system.

⚠ CAUTION

GENERAL REQUIREMENTS

- *The Installation of the* **Owandy-RX PRO** *system and all its accessories must be executed only by trained, qualified and authorized service personnel.*
- *Owandy Radiology or its authorized technicians are not allowed to check the conformity of the installation site with the local laws and regulations in terms of Electrical safety, X-ray protection or any kind of safety regulations of the country and location where the* **Owandy-RX PRO** *is installed.*
- *The* **Owandy-RX PRO** *must be installed and operated in accordance with the safety procedures and operating instructions given in the Operator's manual, Installation & Maintenance manual and Maintenance Manual and all the connected accompanying documents for the purposes and intended use for which it was designed.*
- *It is mandatory for the RESPONSIBLE ORGANIZATION to provide a routine and special maintenance schedule for biomedical equipment; this schedule must be documented for every device and transmitted to the various operating levels (*).The preventive maintenance (that must be performed at least every twelve months), which includes functional, performance and safety tests of the device, must be carried out by qualified, authorised professional technicians, it is mandatory to ensure patients' health and safety and proper Owandy-RX PRO operation (IEC 60601-1 etc.).These operations must be carried out according to the methods and frequency indicated in this manual, in the installation and maintenance manual and maintenance manual. Failure to comply with this requirement or with the messages concerning anomalies will release the manufacturer from any liability for direct and indirect injuries to persons and/or damage to property or the environment. Furthermore, the managers of the facility, customers or collaborators shall be held liable for any damage and/or accidents and/or degeneration of patients' or operators' health or of the surrounding environment.*
- *The RESPONSIBLE ORGANIZATION must also provide for the safe and proper use of the equipment. (*) For Italy refer to Presidential Decree 14/01/1997, Legislative Decree No. 81/2008 (as subsequently amended and modified).*
- *Carefully follow the instructions in this manual and the accompanying documents to install and proper maintain and use the* **Owandy-RX PRO** *device. In the event that local laws and standards are more restrictive than the manufacturer's indications, the former supersede the latter.*
- *The installation and placing in service of the* **Owandy-RX PRO** *must comply with the standards and regulations in force concerning the installation of the medical device in consideration of the place and country of installation.*
- *The* **Owandy-RX PRO** *must be installed in order that the operator must be able to monitor the patient throughout the entire duration of the x-ray examination.*
- *It is prohibited to modify or attempt to repair the electronic boards of the* **Owandy-RX PRO**.
- *Owandy Radiology and its authorised technicians are not required to verify compliance of the installation site with local standards concerning electrical safety and X-ray protection and with any other directive concerning safety in force in the country of installation.*
- *The RESPONSIBLE ORGANIZATION of the* **Owandy-RX PRO** *must ensure compliance of the installation site with the local laws in force*

⚠ CAUTION

PROTECTION AGAINST RADIATIONS

The «General principles for safeguarding and protecting the personnel and patients» must always be applied during the use of the X-ray unit.

1. *Justification of the practice*
2. *Optimisation of protection principle (ALARA principle)*
3. *Individual risk and dose limits*

- *The Owandy-RX PRO is a medical device that generates X-rays; therefore, both the patients and the operator are exposed to risks due to ionising radiation. The physician must assess the actual need for X-ray exposure.*
- *All personnel present during x-ray examination must comply with safety regulations concerning protection against radiation. For his own safety, the operator must always keep a distance of more than 2 meters (6 ft.) from the x-ray beam.*
- *The Owandy-RX PRO medical device must be installed and used in compliance with the local standards in force and with the international directives concerning radiation protection.*
- *Comply with the guidelines and indications provided by an accredited specialist in radiation protection, who will recommend, if necessary, the additional shields or precautions for every specific case.*
- *The device installation site must be shielded in compliance with the local standards in force to protect the operator, patient and other people against X-rays.*

This symbol draws the ATTENTION to X-ray hazards

⚠ CAUTION

MECHANICAL RISK

- Pay extremely attention to the tension of the internal spring of the scissor arm in order to avoid the arm opening and causing injury.
- Check that the installation of the Owandy-RX PRO respect the mechanical specifications of the support (walls, ceiling, etc..) where it is installed
- Avoid installing the Owandy-RX PRO in environments where severe mechanical vibration or shocks are present.
- Adjustments or any kind of attempt of repairing or disassembling must only be performed by qualified and authorized service personnel.

⚠ CAUTION

ELECTRICAL SAFETY

- The x-ray system contains high voltage. It's not allowed to inspect internal parts of the system.
- Never attempt to open the x-ray source.
- The covers on the Owandy-RX PRO equipment must only be removed by qualified and authorized service personnel.
- The unit must be installed only in environments that are in compliance with all the electrical safety standards set forth for medical environments.
- The unit is NOT equipped with protections against penetration of liquids; it will therefore be necessary to make sure that no water or other liquids penetrate inside so as to avoid short circuits or corrosion.
- Always disconnect the x-ray system from the power supply and wait for 2 minutes before beginning cleaning or disinfecting operations or maintenance.
- Do not connect a multiple portable socket outlet (MPSO) or extension cord to the system.
- External equipment intended for connection to signal input, signal output or other connectors shall comply with the relevant product standard e.g. IEC 60950-1 for IT equipment and the IEC 60601-series for medical electrical equipment. In addition, all such combinations - systems - shall comply with the safety requirements stated in the collateral standard IEC 60601-1-1 or the general standard IEC 60601-1, edition 3, clause 16. Any equipment not complying with the leakage current requirements in IEC 60601-1 shall be kept outside the patient environment i.e. at least 1.5 m from the patient support.
- Any person who connects external equipment to signal input, signal output or other connectors has formed a system and is therefore responsible for the system to comply with the requirements. If in doubt, contact qualified medical technician or your local representative.
- An isolation device (Separation Device) is mandatory needed to isolate the equipment located outside the patient environment from the equipment located inside the patient environment. In particular such a Separation Device is required when a network or data connection is made. The requirements on the Separation Device is defined in IEC 60601-1-1 and in IEC 60601-1, edition 3, clause 16.
- Pay extreme care of the internal cables throughout the whole unit in order not to damage them
- Basing on the IEC 60601-1, the installation of the Owandy-RX PRO wall version is permanent type (fixed). IT IS NOT ALLOWED TO connect the equipment to the main supply using a plug
- Do not modify or try to modify any internal wiring or connector which are already present and provided in the Owandy-RX PRO.

WARNING - CAUTION

ELECTRICAL SHOCK HAZARD!
For your safety, ALWAYS remember to turn the Owandy-RX PRO power switch off, as well as disconnect the main power supply during installation or before carrying out any maintenance operation.
Remember as well to keep disconnected the Owandy-RX PRO from any active powered device.

WARNING

ESD WARNING!
Pay attention when managing PCB boards! Permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.
All PCB boards are made up by electronic components sensitive to electrostatic discharge (ESD).
Permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.

CAUTION

PROTECTION AGAINST EXPLOSIONS

The x-ray system MUST NOT be installed in environments with the presence of disinfectants, flammable or potentially explosive gases or vapors that might catch fire and cause damage.

In case these disinfectants have to be used let the vapors completely disperse before turning on the x-ray system.

1.6. EQUIPMENT AND TOOLS NEEDED FOR THE INSTALLATION (NOT INCLUDED)

For a standard installation of the medical device Owandy-RX PRO, the following tools are needed:

1. Drill
2. Wall tips of various size.
3. Paper tape or similar to fix template to the wall.
4. Spirit level.
5. Flexometer.
6. Set of screwdrivers, flat and cross type.
7. Click wrench (suggested dynamometer click wrench to check torque of anchor bolts).
8. Series of metric socket wrenches with extension tube.
9. Series of metric Allen keys.
10. Scissors or cable stripper.
11. Necessary tools and components to install ring and ferrules.
12. True RMS Calibrated Multimeter.

2

RADIOGRAPHIC SYSTEM OVERVIEW

2.1. SYSTEM COMPONENTS

The Owandy-RX PRO radiographic system (Fig.1.1) consists of:

Fig.1.1

1. X-RAY CONTROL UNIT (TIMER) and WALL PLATE
2. HORIZONTAL BRACKET
3. PANTOGRAPH TYPE ARM (SCISSOR)
4. X-RAY SOURCE ASSEMBLY (TUBEHEAD)
6. COLLIMATOR CONE (Beam Limiting Device)
OTHER OPTIONALS
▪ Owandy-RX PRO REMOTE EXPOSURE SWITCH
▪ Owandy-RX PRO LIGHT (Rx signalling lamp for external use)

2.2. SYMBOLS

	En: Power ON (IEC 60417)
	En: Power OFF (IEC 60417)
	En: Protective earth (IEC 60417)
	En: Applied Part: Type B (IEC 60601-1)
	Attention, refer to the attached documents
	Ionizing radiation hazard
	Emitting X-ray equipment (IEC 60417)
	Comply with the implementation standards in your country. European Council Directive 2012/19/EC (WEE) imposes the disposal or recycling of electric and electronic equipment. The product is marked with the following icon. This product must not be disposed of as domestic waste. The crossed-out wheelie bin identifies a product placed on the market after the 13th of August 2005 (see IEC EN 50419:2005). This product is subjected to Council Directive 2012/19/EC (WEEE) and implementation standards in force in your country. The product must be disposed of or recycled to protect the environment. Contact your supplier
	Size of the focal spot (small)
	Hazardous Voltage
	Electrostatic discharge sensitive device
	Pause (IEC 60417)
	X-ray command (IEC 60417)
CE _XXXX	THIS SYMBOL GUARANTEES THAT THE X-RAY SYSTEM COMPLIES WITH THE REGULATIONS CONTAINED IN THE EUROPEAN DIRECTIVE EEC 93/42 AND SUBSEQUENT AMENDEMENTS REGARDING MEDICAL DEVICES
	This symbol remind that is mandatory read carefully the whole documentation and manuals provided with the medical device before perform whatever operation.

FUSE LABEL

Replaceable Fuse	
Rating 100V-240V	T10A H 250V

NOTE

The fuse label is located in close proximity to the main switch.

CAUTION - WARNING

In the event the line fuse needs replacement you must observe all ratings and specifications declared by Owandy Radiology. Call the technical support service for assistance as shown on pages 3 and 4 of this manual.

3

INSTALLATION REQUIREMENTS

WARNING

Prior installing the radiographic system, the Office Owner and the RESPONSIBLE ORGANIZATION must ascertain that the environment, the electrical system and the power supply are complying with the requirements needed, otherwise they must ensure that the compliance is fully satisfied.
It is also necessary ascertain that the room is in accordance with the local laws and regulations regarding radiation protection and electrical safety for environments dedicated for medical purposes.

3.1. ENVIRONMENT REQUIREMENTS

- The installation environment must be of a suitable width: with the size and overall dimension provided in the accompanying documents check that no obstacles are present while positioning the radiographic system.
- The environment must not be exposed to explosion hazards and must not be pressurized
- Avoid installing the unit in environments where severe mechanical vibration or shocks are present

CLINICAL ENVIRONMENT CONDITIONS (OPERATING CONDITIONS)

Temperature: 10 °C (50°F) ÷ 40 °C (104°F);
Relative humidity: 25 ÷ 75 %;
Atmospheric pressure: 850 ÷ 1060 hPa.

TRANSPORTATION ENVIRONMENT CONDITIONS

Temperature: 0 °C (32°F) ÷ 50 °C (122°F);
Relative humidity: see clinical environment conditions
Atmospheric pressure: 500 ÷ 1060 hPa

WAREHOUSING ENVIRONMENT CONDITIONS

See Transportation environment conditions

CAUTION - WARNING

- *Owandy-RX PRO is for INDOOR USE ONLY*
- *If the Owandy-RX PRO has been stored at temperature below + 10°C for more than a few hours, time must be allowed for the device to reach the room temperature before connecting it to the mains voltage and switching it on.*

3.2. REQUIREMENTS OF THE SUPPORTING WALL

- The supporting wall where the Owandy-RX PRO is installed must be able to stand 448 Kg (987.67 LBS) tear at every fixing point.
- Select the right type of wall anchors basing on the wall type, they also should be identical for every attachment point and always complying with the force value reported above.

⚠ CAUTION - ⚠ WARNING

The nature and consistency of the supporting wall must be checked for stability and, if needed, must be checked also by a brickwork expert. Don't install the unit on walls with uncertain consistency or made with material that is not able to support the weights and the specifications described in the accompanying documents of the Owandy-RX PRO.

3.3. REQUIREMENTS OF THE ELECTRICAL SYSTEM

- The electrical system must comply with the regulations in force.
- The electrical system must be able to supply the power and voltage required in the manufacturer's rating plate of the radiographic system (chart A)

Chart A

MANUFACTURER'S RATING PLATE	100 - 240Vac
NOMINAL VOLTAGE	100 - 240 Vac
FREQUENCY	50/60 Hz
Maximum Adsorbed Power (@ 65kV, 7mA, 2 sec)	850VA

3.4. REQUIREMENTS OF THE ELECTRIC LINE

- The electric line must be "single phase alternating" type with range 100 - 240 VAC.
- The electric line must be dedicated to the power supply of the Owandy-RX PRO system.
- The electrical wiring must be effectively grounded complying to IEC - US NATIONAL ELECTRICAL CODE - AND CEI Standards or in any case, all local standards.
- It is essential install a 16A – 250V breaker/differential (Id ≤ 0.03A) switch upstream the radiographic system mains, however it is MANDATORY verifying and complying to current local standards.
- On the power supply line must be installed a mains switch, able to isolate the equipment from the supply mains.
- The power cord to be used for the power supply of the Owandy-RX PRO should be TWO-POLE+GROUND type, section minimum 1.5 mm2 /16AWG (3G1.5), 300/500 V, CSA/UL - IEC
- The power cord used must also conform to the eventual additional regulations of the country of installation.
- No other equipment should be connected to the same fused mains line as the Owandy-RX PRO.
- Basing on the length of the power supply line: See (Chart B)

Chart B

MANUFACTURER'S RATING PLATE	100 - 240Vac
NOMINAL VOLTAGE	100 ≤ V ≤ 240
MINIMUM CONDUCTOR SECTION MAXIMUM LINE LENGHT	L-N-GND, 1.5 mm2 (16 AWG) CSA/UL - IEC 300/500 V 10 m
MAXIMUM CONDUCTOR SECTION MAXIMUM LINE LENGHT	L-N-GND, 2.5 mm2 (14 AWG) CSA/UL - IEC 300/500 V 20 m

PLEASE NOTE

For longer lines, the wiring section must be increased in proportion but the cables MUST always respects the specifications indicated above.

- The independent power cable connecting the mains of the Owandy-RX PRO light must be two-pole type of section Ø1.5mm2 (16 AWG) and
complying to standards CSA/UL - IEC.
- The signal cable connecting the timer and the Owandy-RX PRO light for external use must be two-pole type of section Ø 0.5mm2 (20 AWG) and complying to standards CSA/UL - IEC.
- The cable connecting the timer and the Owandy-RX PRO remote exposure switch for external use must be three-pole type, of section Ø 0.3mm2
(24 AWG) and complying to standards CSA/UL - IEC.

- The electric line characteristics must (Chart C)

Chart C

MANUFACTURER'S RATING PLATE	100 - 240Vac
MAXIMUM LINE VOLTAGE DROP	3%
APPARENT LINE RESISTANCE	0.2 Ω

3.5. ELECTRICAL CONNECTIONS

WARNING

Prior to installing the radiographic system, it is advisable that all the electrical connections be laid out.

The electrical system must be suitably earthed, in compliance with IEC and American NEC standards and with the laws in force in the country of installation.

In Italy, the system must be made in a workmanlike manner and in compliance with the CEI 64-8 standard, including all collateral standards concerning premises dedicated for medical purposes

X-Ray control unit (Timer)
On the timer installation wall, suitable runs for the following electric cables must be provided, according to the installation electric diagram:

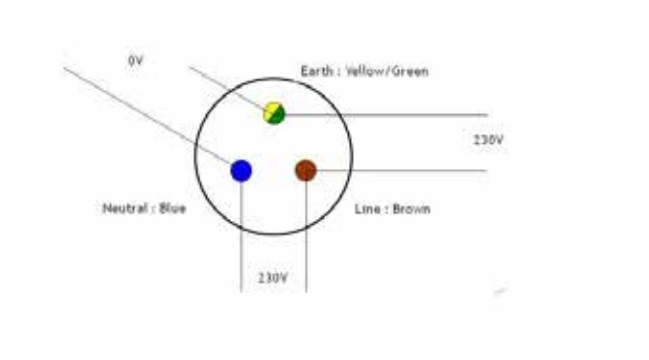
- X-Ray control unit (Timer) mains cables
- Cables connecting the timer and the X-Ray signalling lamp Owandy-RX PRO light (optional) (20 AWG, CSA/UL/IEC)
- Cables connecting the timer and the Owandy-RX PRO remote control button (optional) (24 AWG, CSA/UL/IEC)

CAUTION

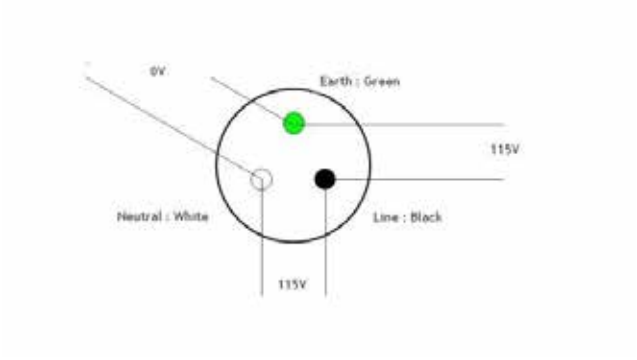
According to the relevant standard, the x-ray control unit must be installed in a stationary location allowing the operator to control the radiographic exposure at a fixed position.

The connecting cables between the mains and the timer must be run through the wall supporting the wall plate:

EUROPEAN STANDARD



US STANDARD



EU Line (brown): 16 AWG / US Line (black): 16 AWG

EU Ground (yellow/green) / US Ground (green) 16 AWG

EU Neutral (blue): 16 AWG / US (white): 16 AWG

4

INSTALLATION POSSIBILITIES

⚠ CAUTION

The equipment must be installed so that the operator can see the parameters and the armed mode indicator when releasing an exposure with either types (local or remote) the exposure switches.

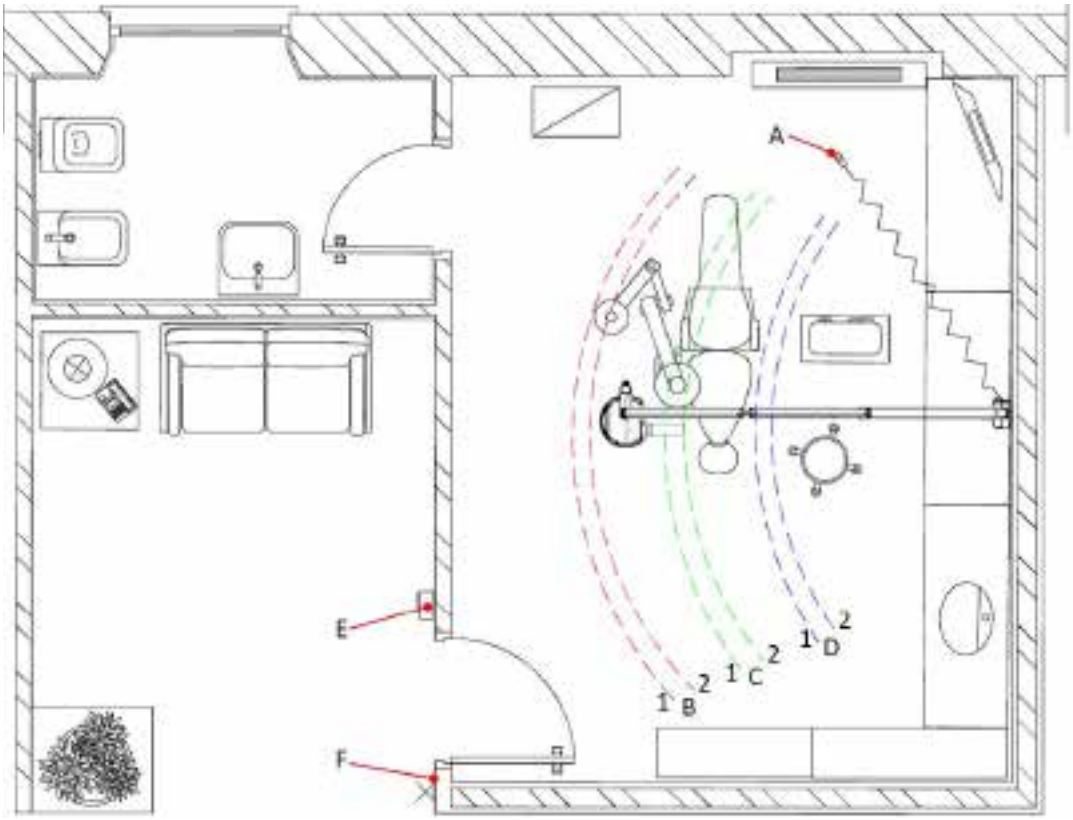


Fig.4.1.

5 INSTALLATION

⚠ CAUTION

The Owandy-RX PRO radiographic system must be installed by professionally trained technicians, who must be able to certify their work to their local state regulatory body.

WARNING

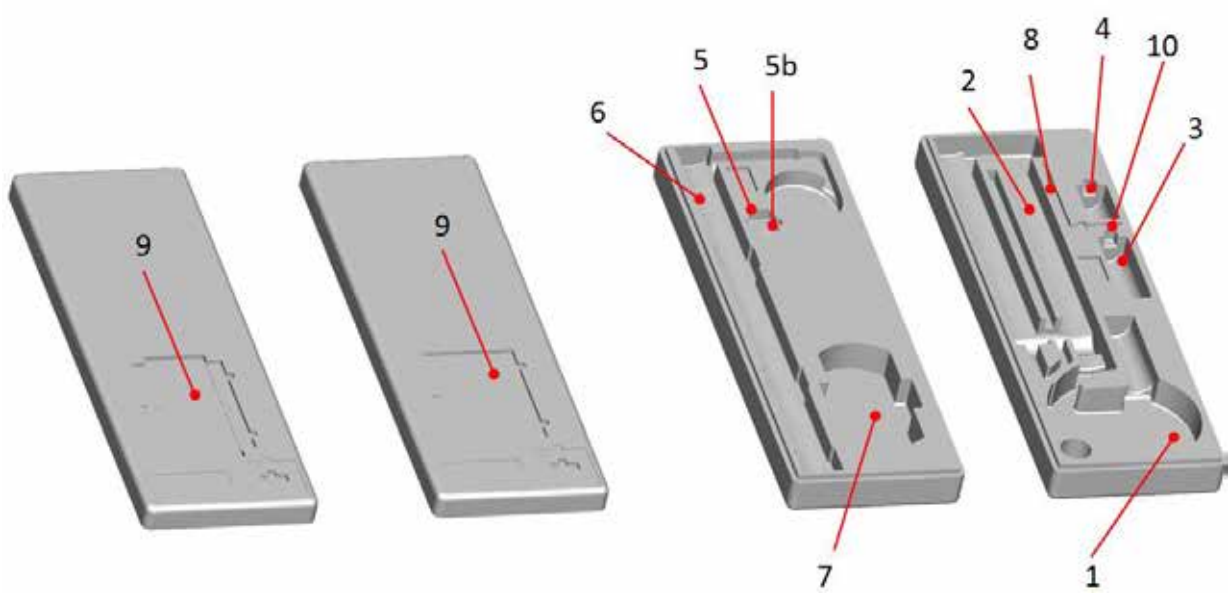
Prior to installing the radiographic system verify that all needed requirements have been met (refer to Chapter "Installation Specifications")

⚠ CAUTION - WARNING

During the installation pay extreme attention of the proper connection of the all internal grounding leads of the Owandy-RX PRO, that must be properly and safely connected. For additional information refer to the electrical and wiring schemes provided in the Installation & Maintenance Manual.
It is mandatory check the safety ground continuity with proper calibrated instruments and according to the regulations in force after the installation, before the first use of the unit or after each maintenance or repairing. The checking of the proper electrical connections and safety grounding must be part of the periodical maintenance of the Owandy-RX PRO device.

5.1. UNPACKING

The components of the Owandy-RX PRO radiographic systems are properly packed within 2 boxes, as shown in the Fig. below:



1	X-Ray Source Assembly (tubehead) + Long cone
2	Pantograph Type Arm (Scissor)
3	Long Cone Types
4	Short Cone Types
5	Bracket cap
5b	Grease
6	Bracket
7	X-Ray Control unit (Timer)
8	Spring adjustment key
9	Quick Start Guide, Wall Template, general documents
10	Screw caps

PLEASE NOTE

Prior to installation, properly check all components and check whether the product shows any visible signs of damage

PLEASE NOTE

The x-ray source assembly and the pantograph arm are already connected together.

PLEASE NOTE

It is advisable to store the original packaging to return the goods for repairs.

5.2. ASSEMBLING THE WALL PLATE

WARNING

The wall plate must NEVER be rotated, it must be installed with the same orientation both for TOP and BOTTOM installation.
The only difference it is the height of mount from the floor. Refer to the overall dimension drawings for more information concerning the suggested heights.

WARNING

The back cover of the wall plate must be installed BEFORE fixing the plate to the wall, it won't be possible do that later.
This because the 3 centering pins of back cover indicated in the pictures can be inserted in the wall plate only from the back.

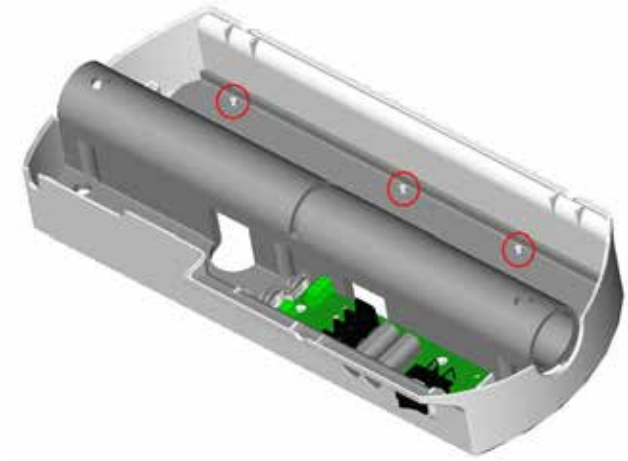


Fig. 5.2

CAUTION - WARNING

To fix the wall plate DO NOT use plastic or rubber anchor screws.
For cement walls, or walls built with solid or hollow bricks, use metal anchor screws Ø12 (NOT included in the supply) suitable for supporting forces and weights specified in the Owandy-RX PRO manuals.
Anchors screws must be of maximum M8 size with hexagonal head or Allen key head.
You must choose anyway an attachment system suitable for the type of wall and capable of withstanding a tear-off force as specified in the accompanying documents of the Owandy-RX PRO.
Check that the wall is flat and level to avoid any drift in the arm position.

PLEASE NOTE

Please remove the paper template before screwing the timer to the wall board!

PLEASE NOTE

IMPORTANT: In case of new installation or replacing existing BOTTOM installation of a previously installed Owandy-RX AC or Owandy-RX DC family, use the holes (A) and (B).
Use holes (C) instead of (B) ONLY to replace a previous TOP installation of previous installed xgenus / Owandy-RX AC or Owandy-RX DC family.

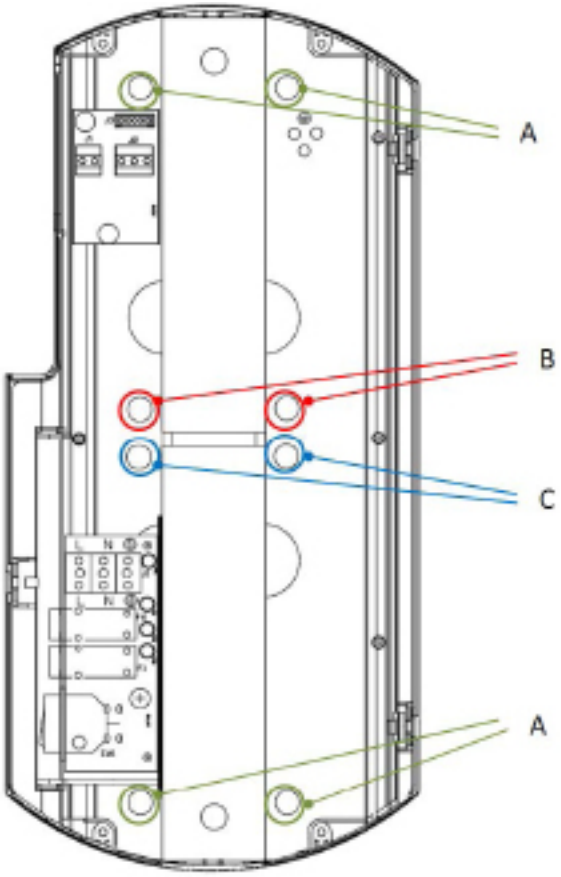

Fig. 5.3

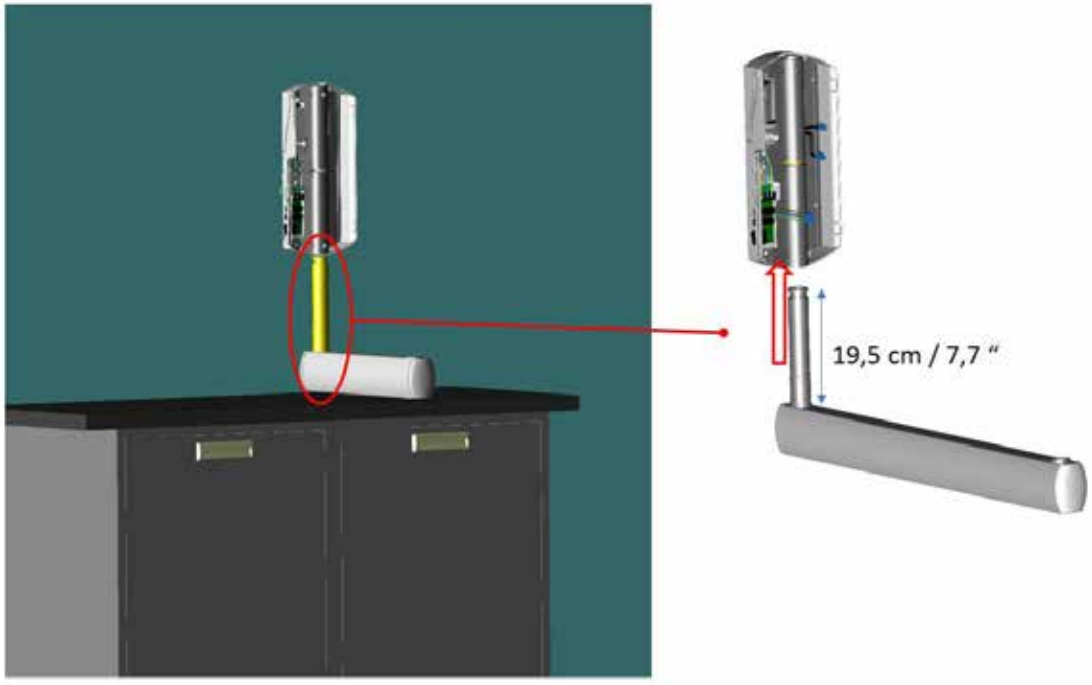
PLEASE NOTE

IMPORTANT: In case of installation over furniture please consider enough space to insert the bracket pin, otherwise assemble the bracket to the wall plate before fix it to the wall.



ASSEMBLY INSTRUCTIONS (Fig. 5.4-5.6)

1. Remove the X-Ray Control Unit (timer) plus wall plate plus drilling template assembly from the packaging.
2. Start to disassemble the wall plate from the timer unscrewing the four screws (5) on the front cover and lift it to remove the cover (4).
3. Then unscrews the four screws (3) of Control power board box (2).
4. At this point the wall plate and timer back cover (1) can be installed to the wall.

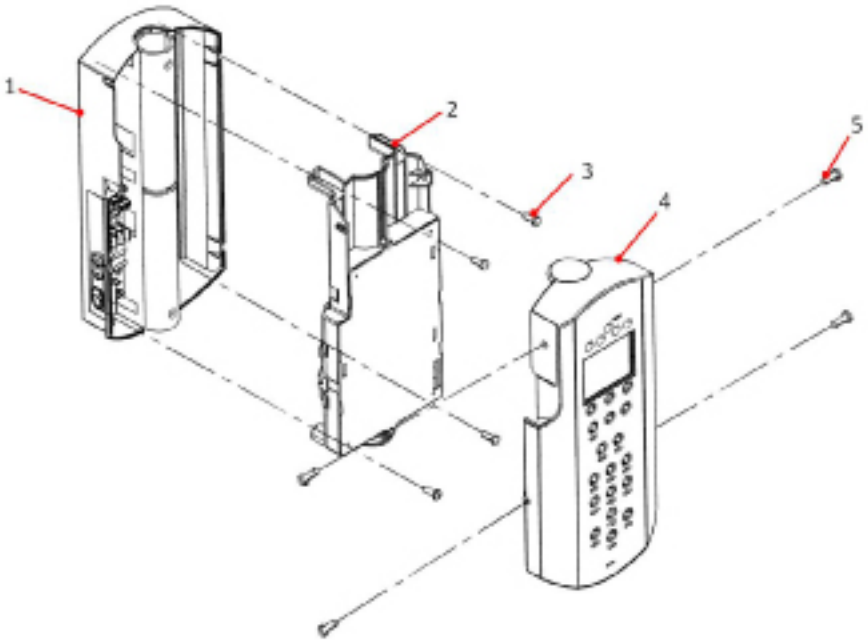


Fig. 5.4

Once the assembly has been disassembled according to the above, position the drilling template (A) on the radiographic system installation wall, at the required height:
130cm (51.18 in) from the base for BOTTOM MOUNT / 87 CM (34.25 IN) from the base for TOP MOUNT

WARNING

Do not use the wall plate as a drill template, you could damage the PCBs installed in it.
Always use only the paper template provided in the official packaging of the Owandy-RX PRO to perform the wall drilling.

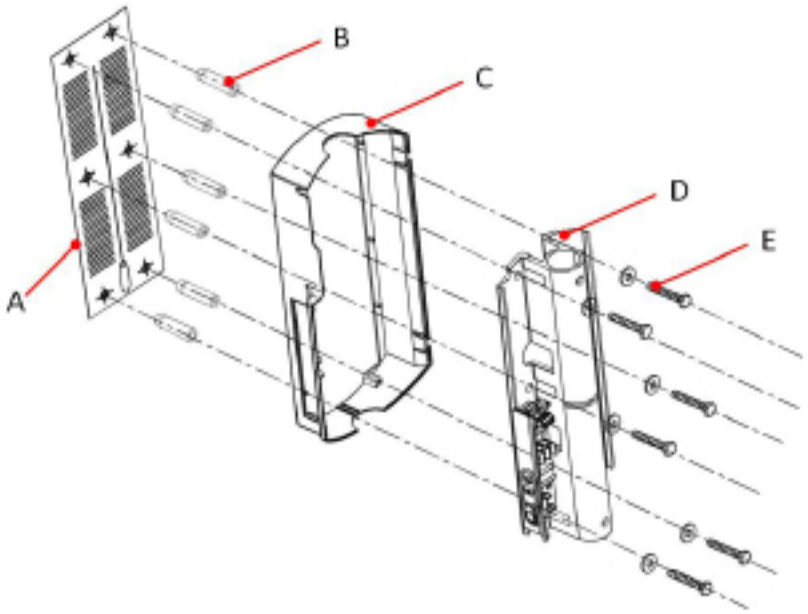

Fig. 5.5

1. Fix the template with adhesive tape
2. Check the holes in order to obtain the proper verticality and alignment with the floor, using a plumb line
3. Mark the fixing holes of wall plate
4. Also mark the holes for the electric cables connecting mains, optional exposure key or external light to the timer

PLEASE NOTE

To prevent any flaking of the dry wall and to control the center distances between the holes, it is advisable to start drilling with a tip Ø7 mm / (9/32"), increasing this measure gradually

5. Drill the fixing holes
6. Remove the template (A) and insert the suitable anchor screws (B), according to the wall characteristics.
7. Insert the timer back cover (C) to the wall plate (D) using centering pins.
8. Lean the assembly (1) to the wall in correspondence of the holes.
9. Hold the assembly (1) to the wall and insert the screws (E) with the relevant washers, then tighten alternately.
10. Make sure that supply mains cables, remote exposure key (Owandy-RX PRO ECB) and external light (Owandy-RX PRO light) are passing through the right hole. (Y)
11. Check that the assembly (wall plate + timer back cover) (1) is steadily fixed to the wall.

PLEASE NOTE

If the wall is not perfectly leveled, put a suitable shim between the wall and the wall plate to prevent any possible deformations

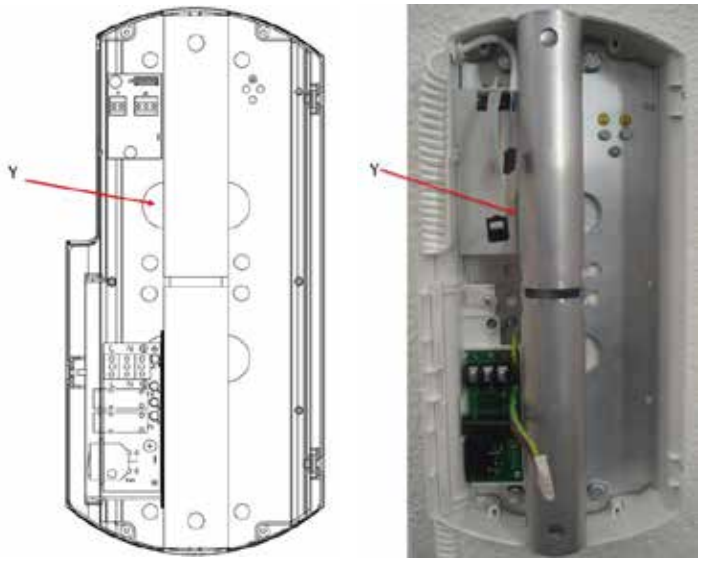

Fig. 5.6

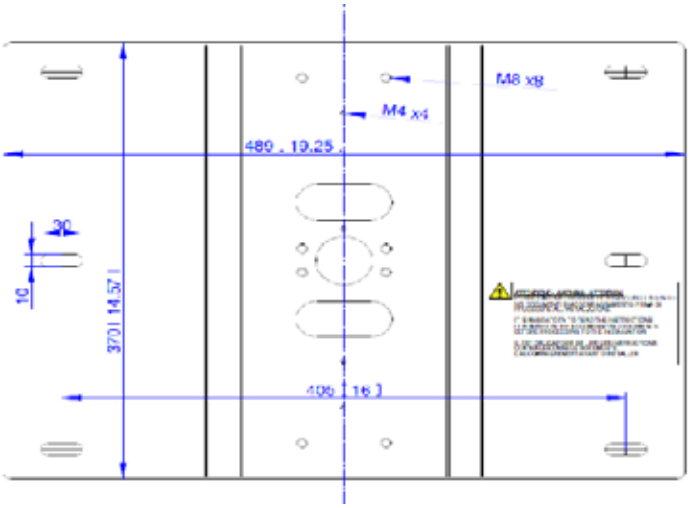
5.2.1 ASSEMBLING THE WALL PLATE INTERFACE

⚠ WARNING

You have to use the wall plate interface(ref. code W0800159) only when you have a distance between of the pillar of 16" or 40.64cm.

ASSEMBLY INSTRUCTIONS

1. Fix the template with adhesive tape;
2. Check the holes in order to obtain the proper verticality and alignment with the floor, using a plumb line;
3. Mark the fixing holes of the wall plate.

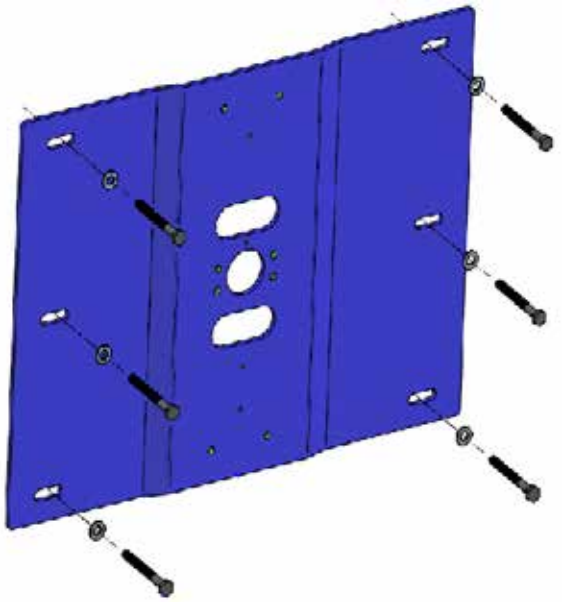


4. Drill the fixing holes;

⚠ WARNING

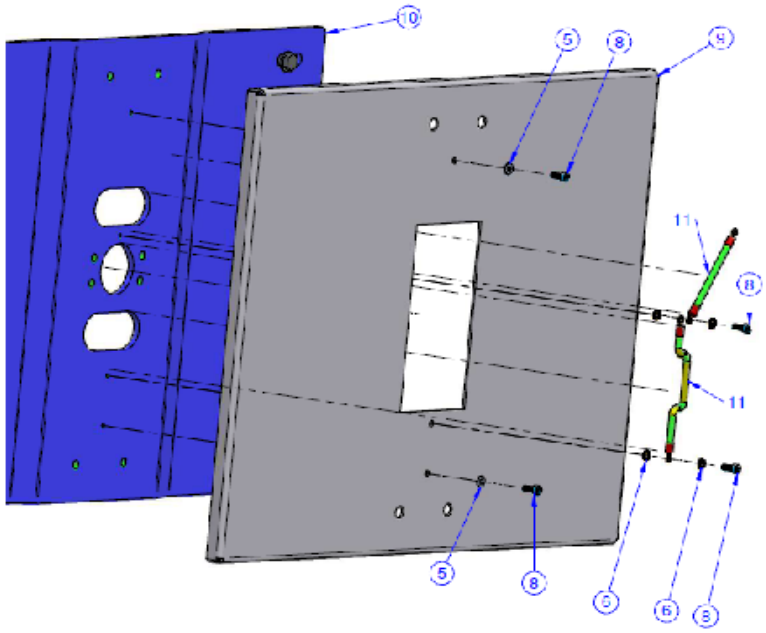
Remove the template and insert the suitable anchor screws, according to the wall characteristics.

5. Fix the additional wall plate with 6 screw M8 and 6 wide spring washer M8.

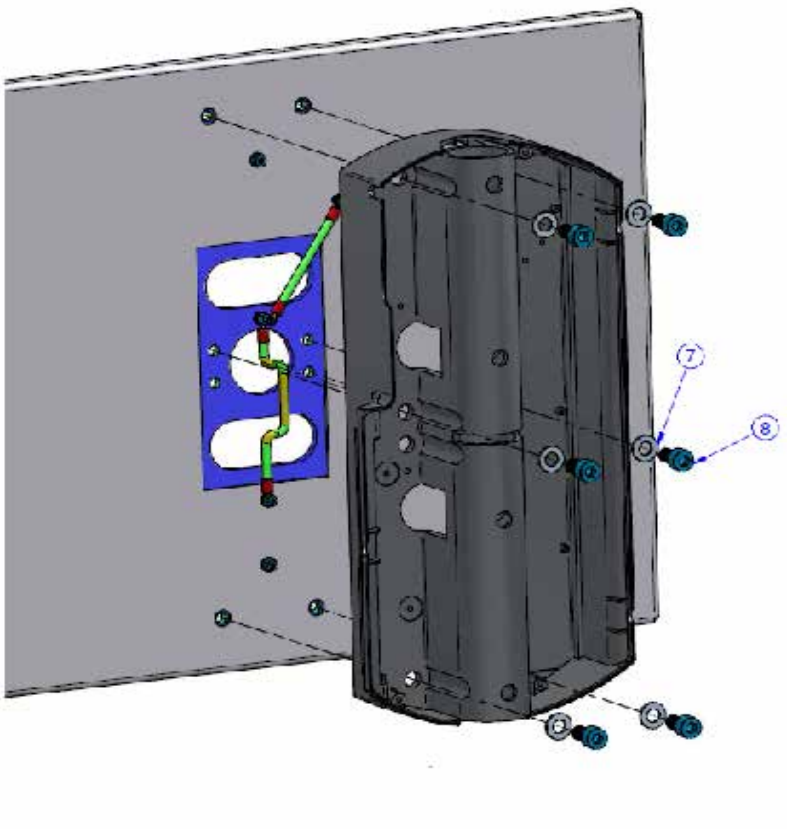


6. Fix the cover(9) on the additional wall plate whit 2 screw 4x10(8) and 2 washers M4(5).
You will find the ground wires(11) already connected on the wall plate interface(10).

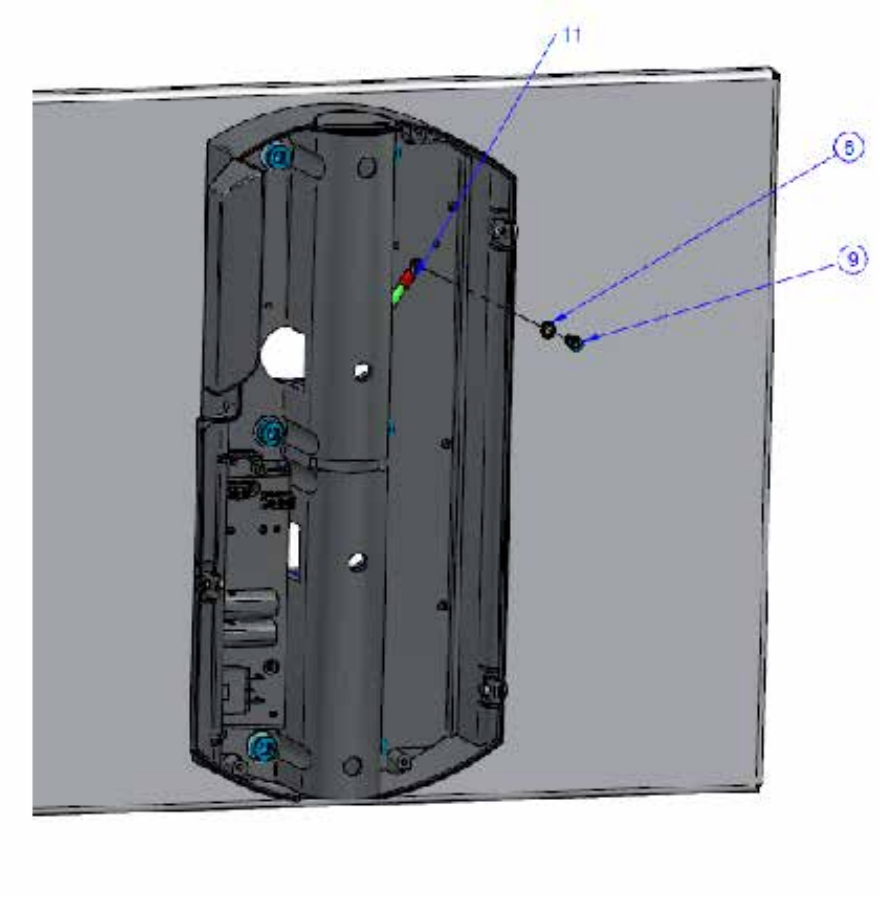
7. Fix the ground wire on the cover(9) with 4x10(8) and double milled washers(6).



8. Fix the control unit on the cover with 6 screws M8x16(8) and 6 washers M8(7).



9. Fix the ground wire(11) with 1 screw M4x10(9) and double milled washers(6).



5.2.2 ASSEMBLING THE HORIZONTAL BRACKET

All the types of horizontal bracket available are already provided with the ground internal wiring.
A ground cable provided with ring for protective ground connection is connected at the bottom of the bracket and it must be routed and connected on the wall plate as indicated in the following instructions contained in the manual.

BRACKET PREPARING INSTRUCTIONS

Take out the bracket from the box and disassemble it as shown below, in order to have access to the cables area.
The bracket cap on the scissor arm side is already disassembled.
The disassembling procedure it is the same both for TOP and BOTTOM brackets.

To disassemble the bracket cap:
1. Remove the screw cap by using a little flat screwdriver (1).
2. Remove the screw (2) by using a Metric Allen key.
3. Remove the bracket cap (3) and remove the bottom cover (4) sliding it out.

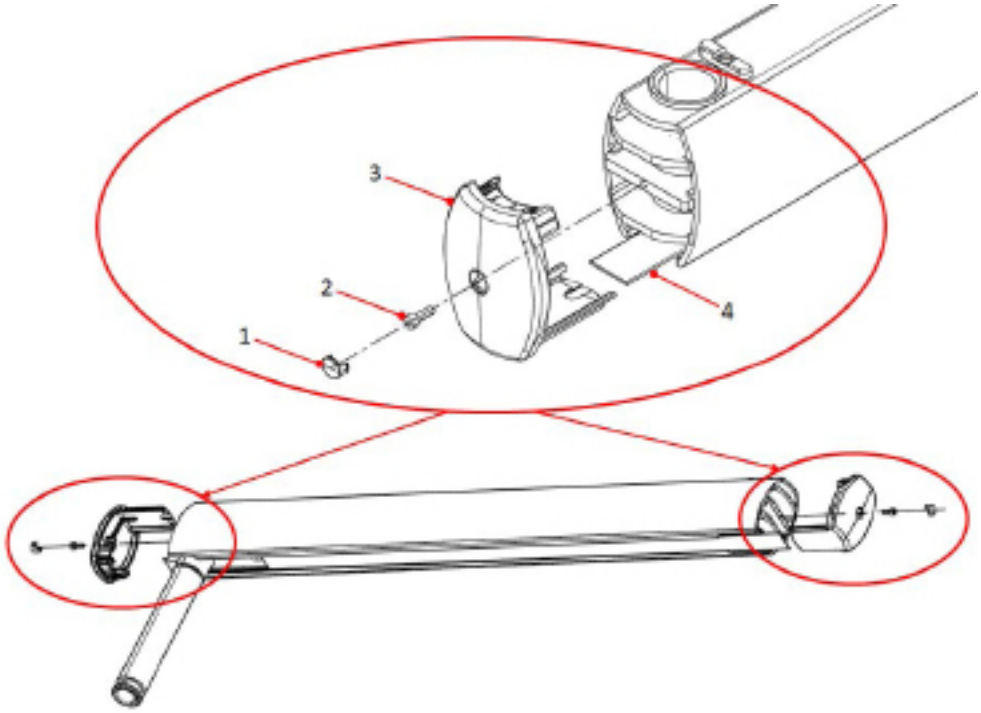


Fig. 5.7

ASSEMBLING INSTRUCTIONS

1. Insert the bracket pin (3) into the wall plate (1) (TOP or BOTTOM depends from installation and bracket type)
2. Insert the half moon clip (2)

BOTTOM MOUNT	TOP MOUNT
 Fig. 5.8a	 Fig. 5.8b

The bracket is provided from the factory with a ground cable already installed in the bracket, ready to be connected. During the operation of insertion of the bracket tube in the wall plate hole, it is suggested first to insert the cable in the tube pushing it gently inside, then fix the bracket by the half moon clip, take the ground cable out from the holes (X) of the wall plate and then fix it properly to the dedicated ground point prepared in the wall plate.

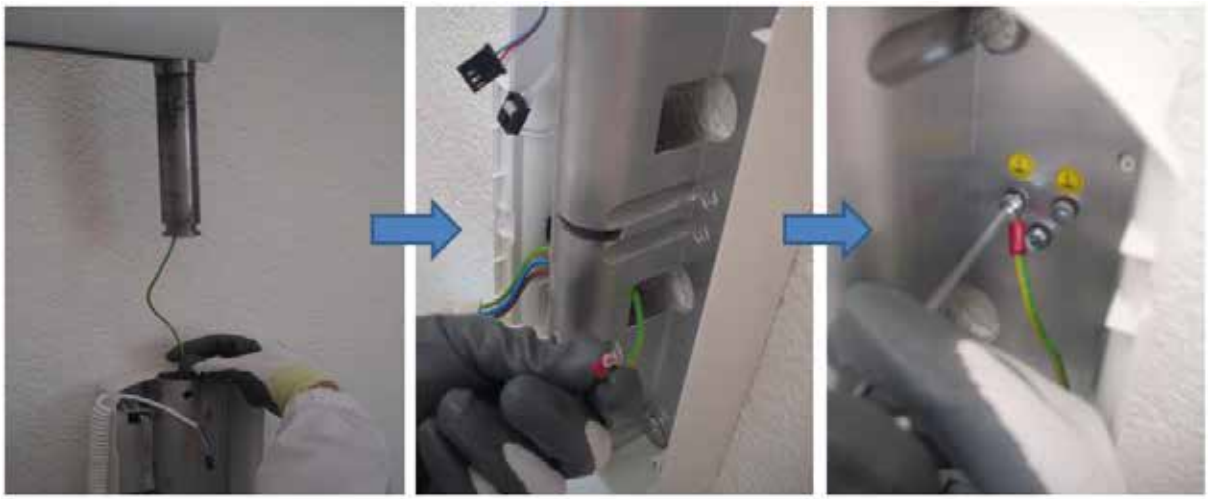

Fig. 5.9.

WARNING

When inserting the bracket pin in the wall plate please pay attention to not pinch or damage the pre-installed cable. Keep them safely inside the tube until the insertion is not complete.

WARNING

Always pay attention to the routing of the cables.
When assembling the mechanical parts make sure that no cables are pinched between parts or position them in order that they can't be damaged in any way.
Do not tight too much the cables. Do not position them in a stressed position.

According to the configuration (TOP or BOTTOM), all the cables coming from the bracket must exit from the top-right holes (X) as shown in Fig. 5.10 - 5.11.

Ground and shielded cables must be connected to the ground point by means of the dedicated screws and rings pre-installed on the wall plate.

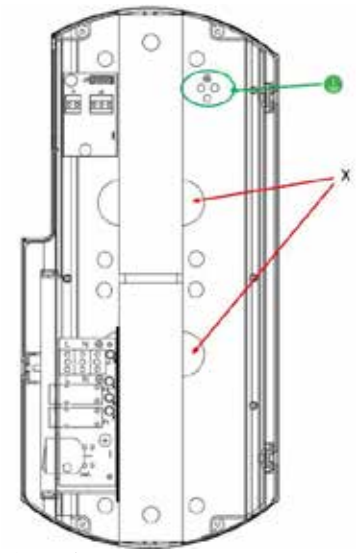

Fig. 5.10

Bracket correctly installed (example of Top Installation. The same approach, but inverted, is also valid for the bottom configuration)

Fig. 5.11

⚠ CAUTION - ! WARNING

For each type of installation (TOP or BOTTOM) always ascertain that the half moon clip is properly installed in its site. Wrong installation of this part can cause injuries to operators, patients and damage the environment.

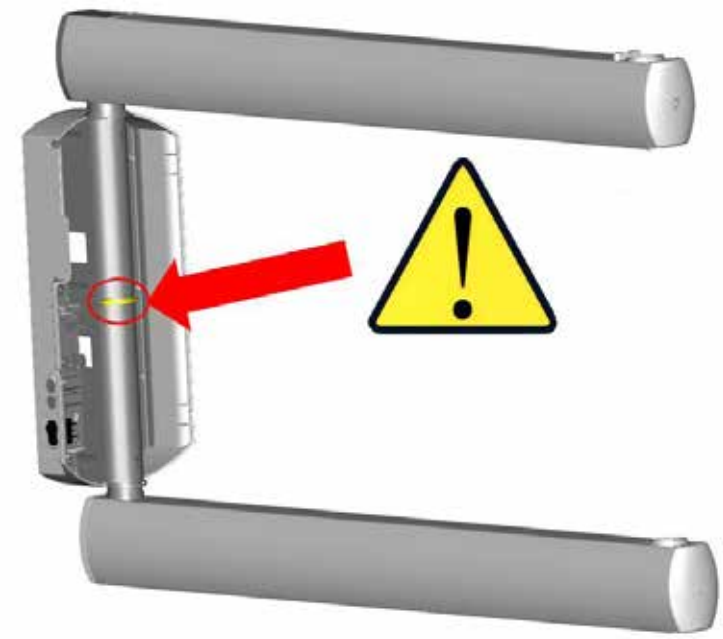

Fig. 5.12

CABLES ROUTING FOR BOTTOM INSTALLATION	CABLES ROUTING FOR TOP INSTALLATION
 Fig. 5.13a	 Fig. 5.13b

PLEASE NOTE

Prevent all foreign matter (dirt, dust, cement, etc.) from setting on the pin seat.
The pin must slide freely in its seat. If required, thoroughly clean and lubricate with Molikote D grease type ONLY as specified by Owandy Radiology. Don't try to use other type of grease.

PLEASE NOTE

Check accurately with a spirit level instrument, the exact alignment between the bracket and the ground floor.

CAUTION - WARNING

The brackets are provided with a stop key (Fig. 5.13A and 5.13B) to prevent the twisting and damaging of the internal wiring through 360° and cause electrical damage.

PLEASE NOTE

In general the stop key is installed in order that the equipment in rest position is positioned on the right side of the installer (looking frontally the wall plate) (Fig. 5.13A).
In case the rest position is desired on the left side, the stop key must be rotated of 180° (Fig. 5.13B).

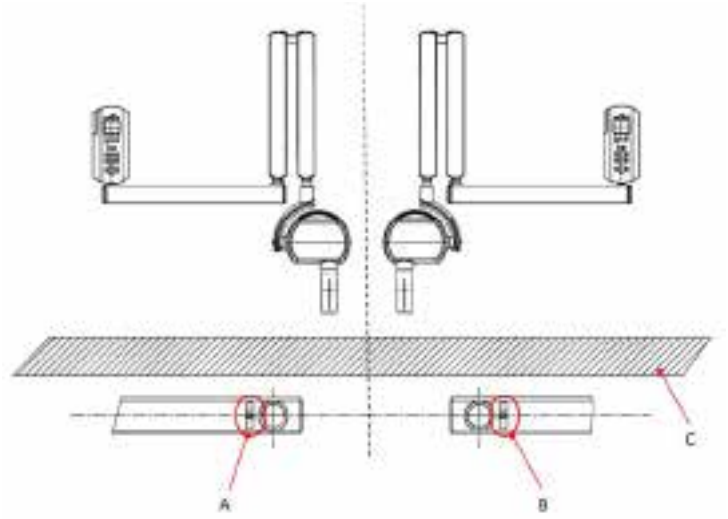

Fig. 5.14

A	Stop key installation for rest position on the right
B	Stop key installation for rest position on the left
C	Wall

WARNING

The presence and proper installation and functioning of the stop key is very important in order to prevent irreversible damage to the internal wiring, Check always the correct installation of this part.

5.3. ASSEMBLING THE SCISSOR ARM

The scissor arm is provided with the X-Ray source assembly (tubehead) already connected and installed.

⚠ CAUTION

The spring contained in the portion of the arm relevant to the tubehead side (Arm B) is provided unloaded from the factory for safety reasons.
Anyway, when removing the assembly pantograph arm and tubehead from the package, check that the mechanical tension is fully unloaded.

⚠ CAUTION

Pay attention when managing the assembly pantograph arm plus tubehead. This assembly is quite heavy and is an extremely delicate part.
Pay attention moving this assembly, we suggest to move that as shown below to be more comfortable during assembling operations.

⚠ CAUTION

Risk of injury!
Do not fold up or try to fold up the scissor arm in the uninstalled state! Carefully transport the scissor arm ONLY in the unfolded state.

! WARNING

Take care of the cables exiting from tube (A), do not pinch or damage these cables.

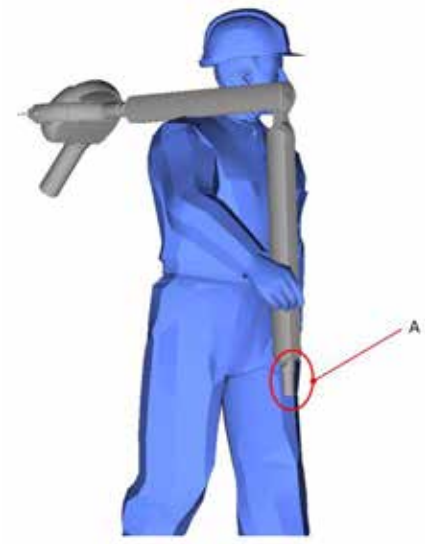

Fig. 5.15

ASSEMBLY INSTRUCTIONS (refer to figures below)

1. Carefully remove the pantograph arm (scissor) from the packaging, pay attention when managing the scissor arm because the tubehead is pre-installed in factory and the whole assembly results quite heavy and very delicate.
When transporting the assembly, it is suggested to carry the scissor arm on your shoulder as shown in the picture above.
2. If not yet done, lift the screw cap (1) using a little flat screwdriver, then remove the fixing screw (2) and the bracket cap (3) by pulling it out from the bracket profile, at the end slide the bottom cover (4) of the bracket.
3. Insert the SCISSOR group wiring (7) into the bushing (5) and then the SCISSOR tube (6).
4. If required, clean the tube and the bushing and lubricate with Molikote D grease type only according to manufacturer's instructions.
5. Insert the wiring into the bracket housing (8).
6. Fix and connect the cables in the bracket as shown below.
7. Arrange the cable in the bracket and close the covers.

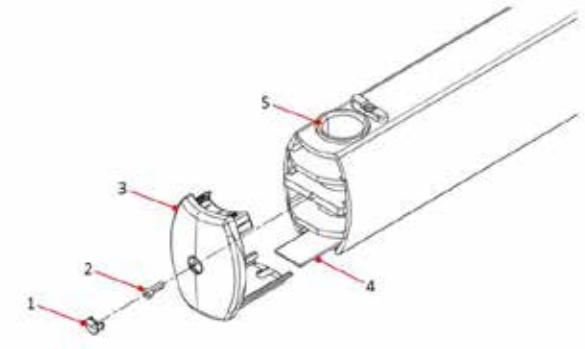

Fig. 5.16

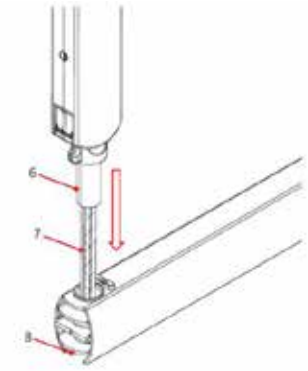

Fig. 5.17

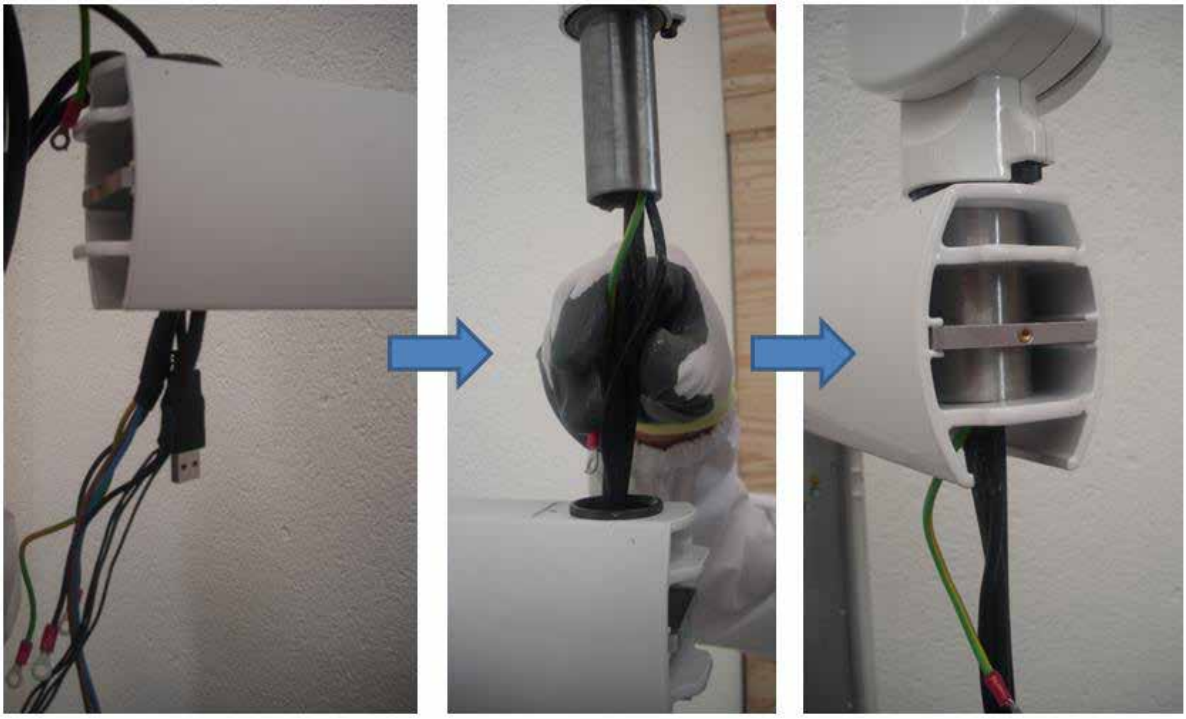

Fig. 5.18

CABLE HOUSING AND CONNECTIONS INSIDE THE BRACKET

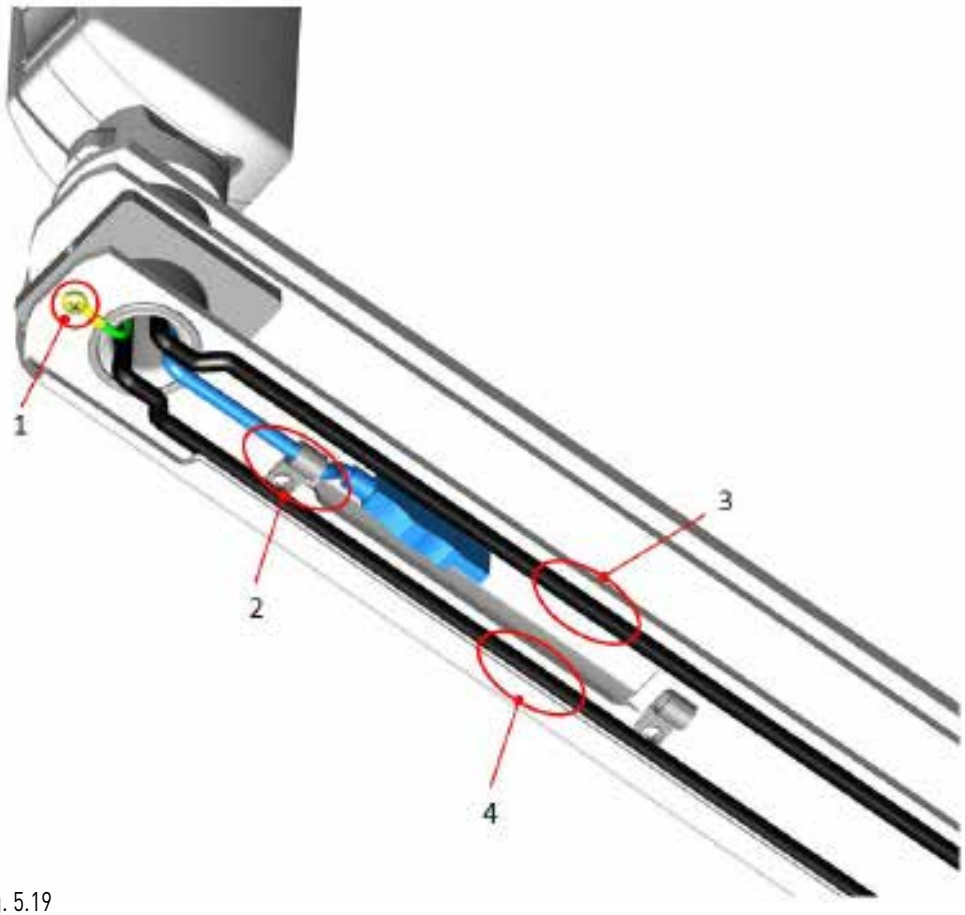

Fig. 5.19

1. Fix ground cable connection in the dedicated terminal (1) of the horizontal bracket by means of screw and toothed washer installed already provided.

Flig. 5.20

2. Fix the USB cable using the cable ties provided in the bracket (the USB connector is protected by a plastic cap as shown below).

Fig. 5.21

3. Route the COMM. CABLE in the bracket.
4. Route the POWER CABLE in the bracket.

When installing a bracket of 40 cm (16") or 80 cm (31"), please route cables excess inside the bracket as shown below:

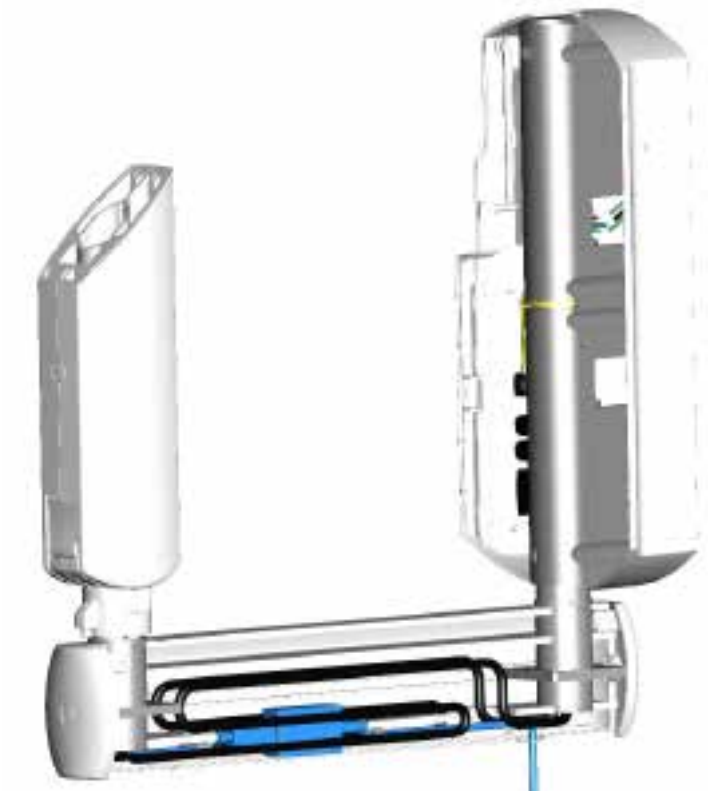

Fig. 5.22

TOP INSTALLATION

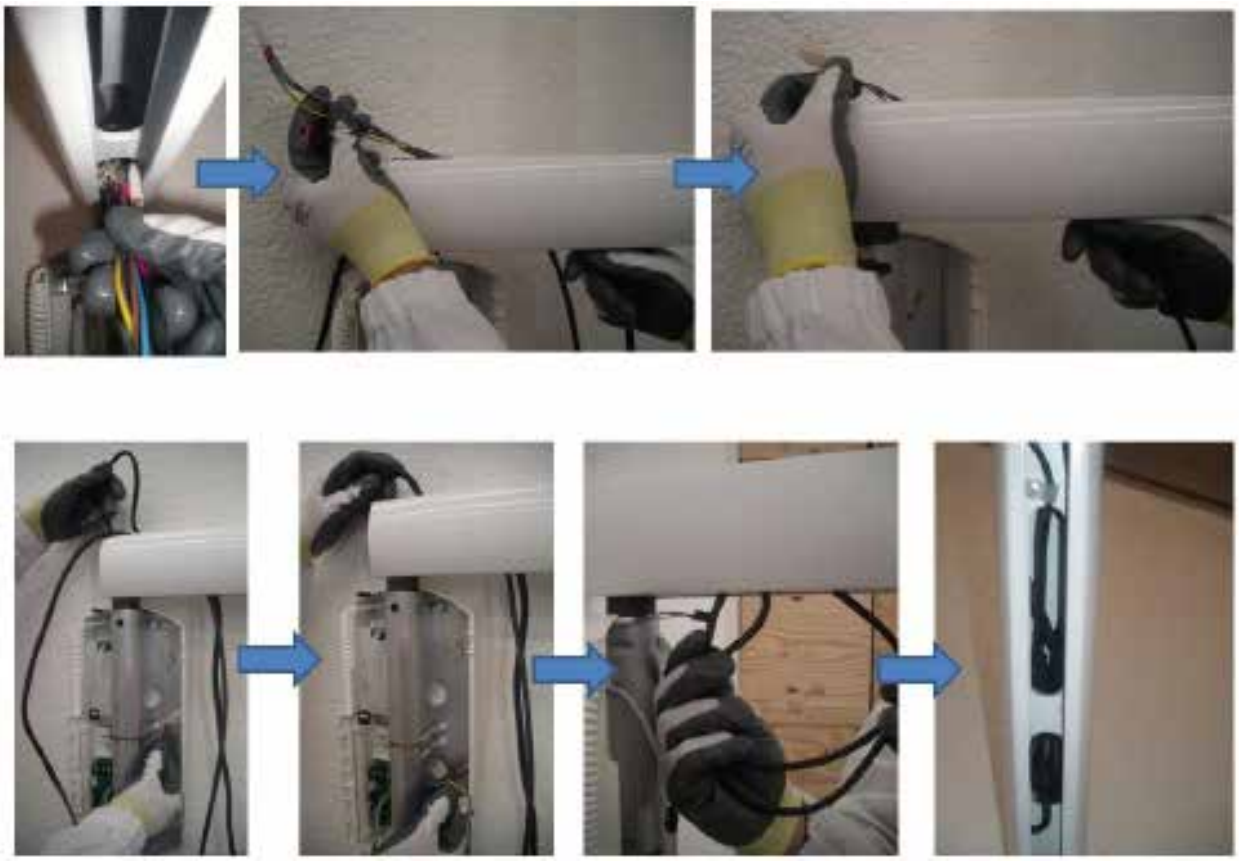

Fig. 5.23

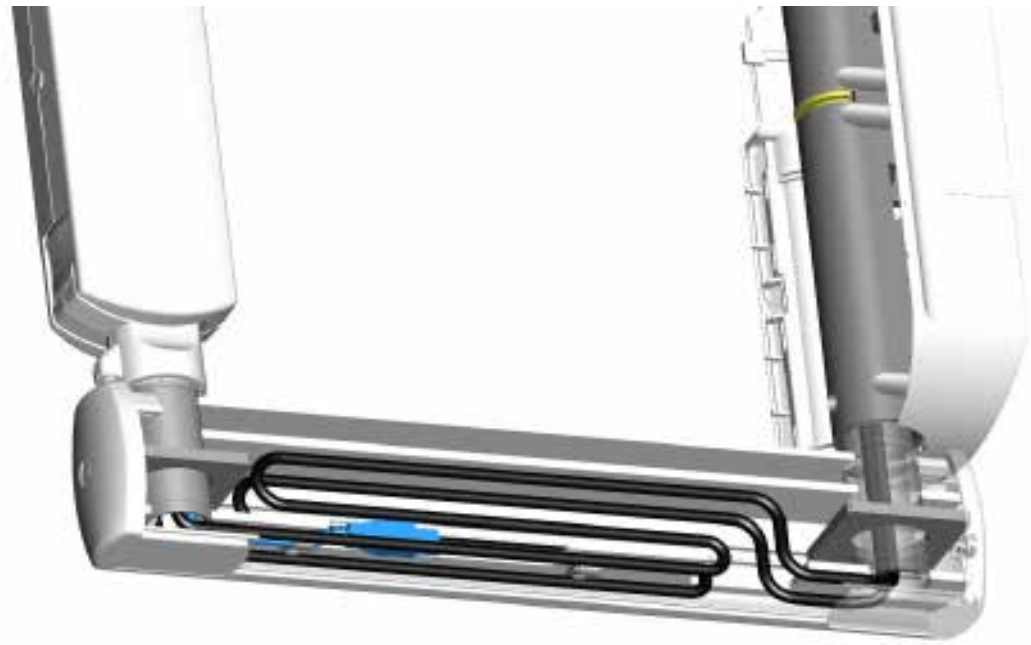
BOTTOM INSTALLATION

In case of bottom installation, cables excess must be managed as shown above.
The only difference is that the cables won't pass through the bracket but directly inside the bracket pin.
Cables must be placed folded in the free space inside the bracket and then routed to the wall plate.



In case SOPIX/SOPIX22 Inside sensor has to be installed, follow the instructions below and the instructions provided with the accompanying documents of the Sopix/Sopix2 Inside (from SOPRO-Acteon Group):

Insert the repeater in its dedicated site inside the bracket (5), connect the USB plug and fix the cable by using the dedicated cable tie (6).

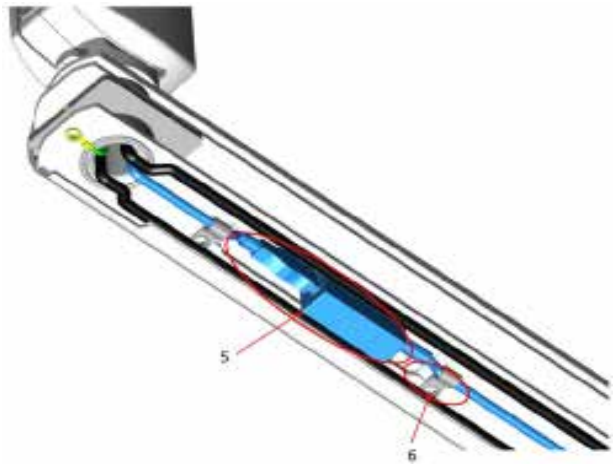


Fig. 5.24

PLEASE NOTE

Always mind to fix USB cable by means of the cable ties provided in the bracket

In case is necessary route the cable through the timer cap or bracket cap (TOP or BOTTOM), please proceed as indicated below by means of drill enlarging the hole step by step basing on the cable size.

Cables routing change basing on installation types, please refer to images below for details:

TOP INSTALLATION (in the example below 110cm - 43" bracket)

BOTTOM INSTALLATION (in the example below 110cm - 43" bracket)

Alternative routing of the USB cable

The USB cable of the USB repeater can be routed out from the bottom side of the x-ray control unit (as shown previously) or routed in the back of the wall plate, for the routing inside the wall plate, follow the same instructions specified for routing the PWR cables and COMM. cables of the bracket (which are exiting from the scissor arm)

USB CABLE EXITING FROM BACK WALL PLATE

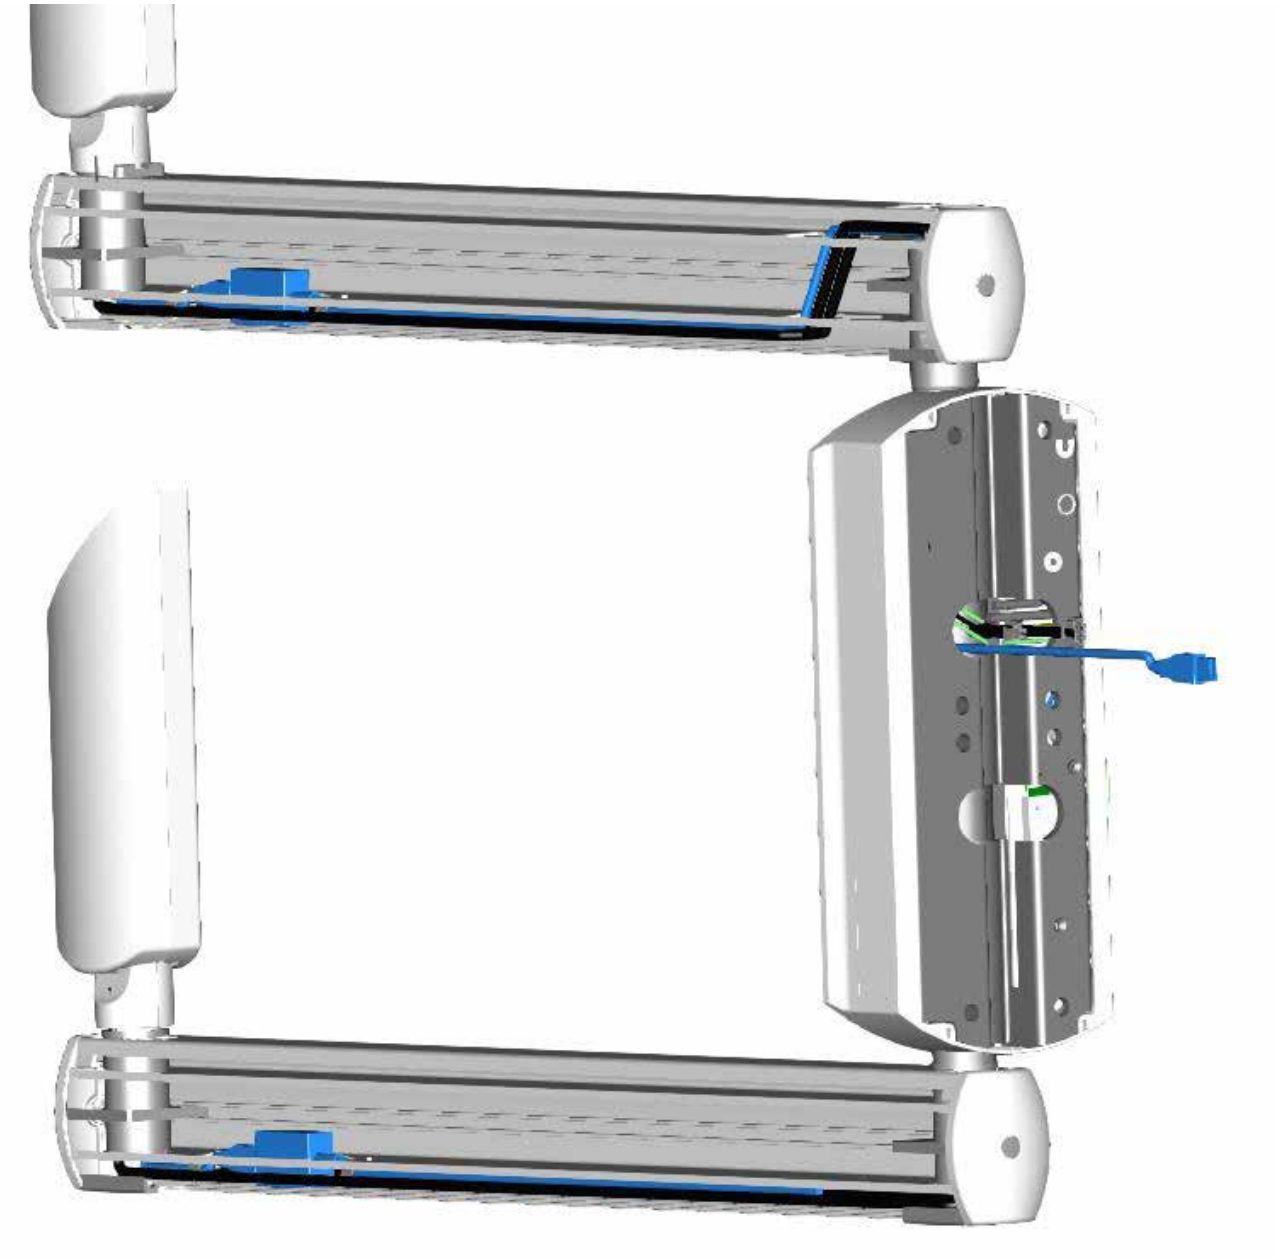

Fig. 5.27

Once the connections inside the horizontal bracket has been properly performed, remember to insert again the bottom slide cover.

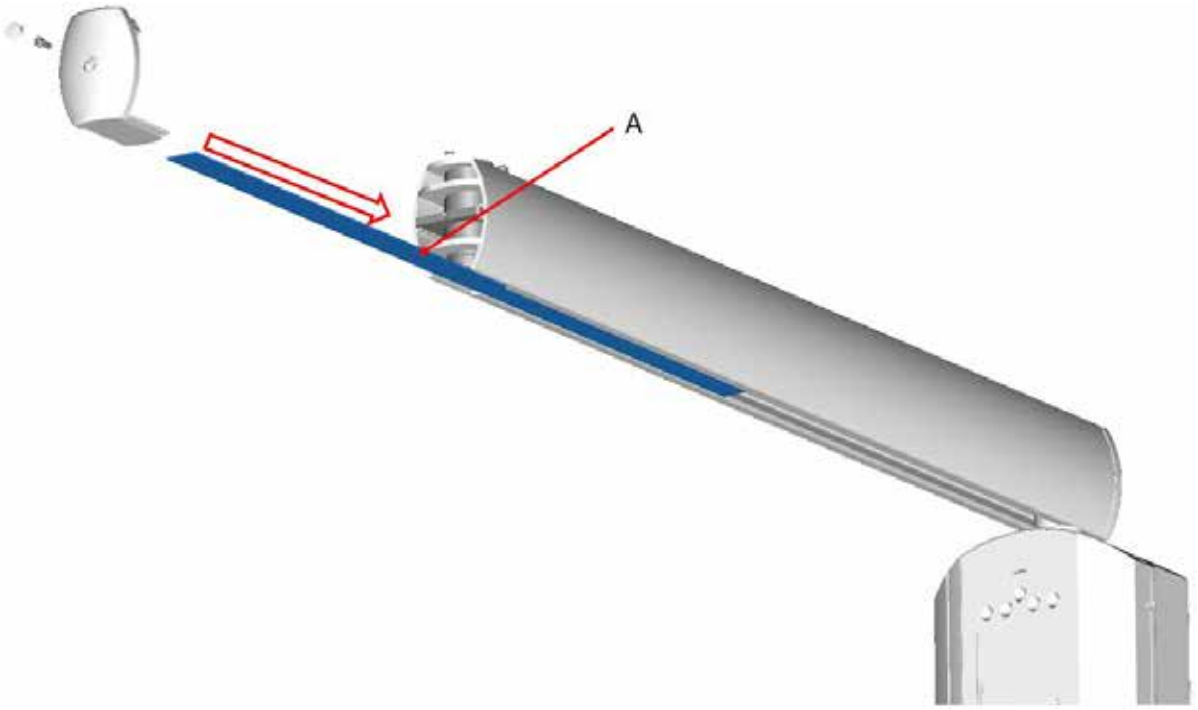

Fig. 5.28 (A = Bottom slide cover)

WARNING

Always remind to insert and properly fix again the bottom slide cover (A) inside the bracket.

WARNING

When routing the cables always be sure sure that they are adequately protected against contact with a moving part or from friction at sharp corners and edges that can damage their insulation.

BALANCING THE SCISSOR TYPE ARM

⚠ CAUTION

The scissor arm must be adjusted ONLY WITH the x-ray source assembly assembled with it.

WARNING

To prevent damages to the internal mechanism while performing adjustment and balancing tests, the adjustment key must not be left in place.

WARNING

The adjustment key provided must be kept at all times for future uses and maintenance. Do not discard!

PLEASE NOTE

To reach the adjustment screw X the arm A must be put in vertical position.
To reach the adjustment screw Y the arm B must be put in horizontal position.
The adjustment key provided can be inserted only under the above conditions.

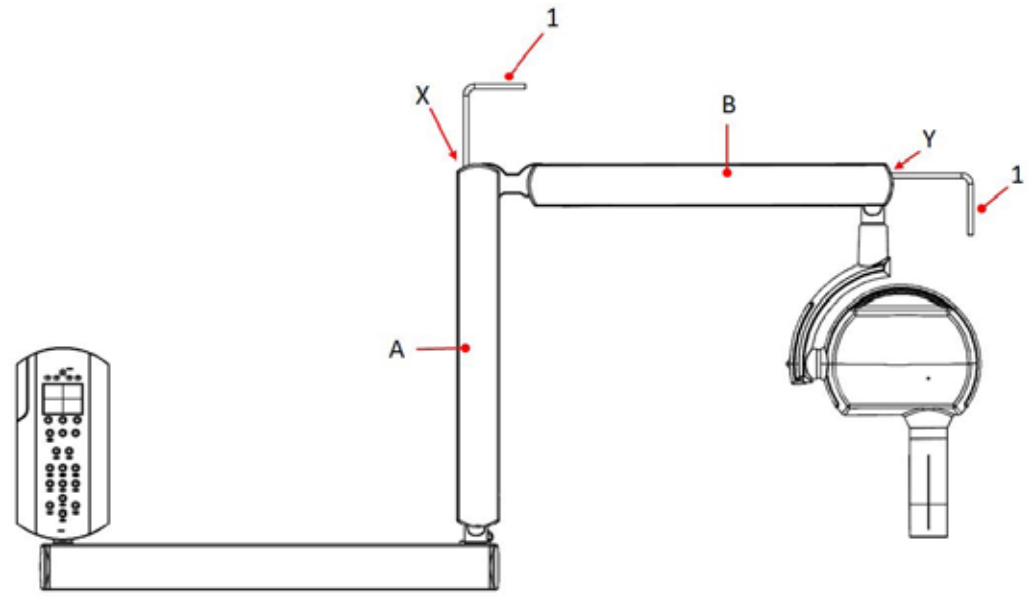

Fig. 5.29

ACCESS TO ARM "A" TO SCREW "X"

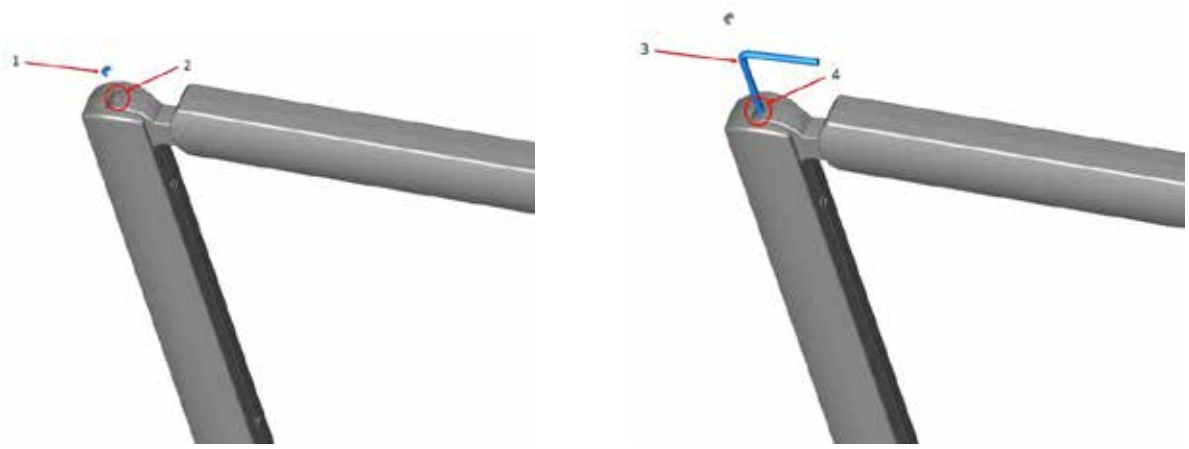

Fig. 5.30

ACCESS ON ARM B TO SCREW Y

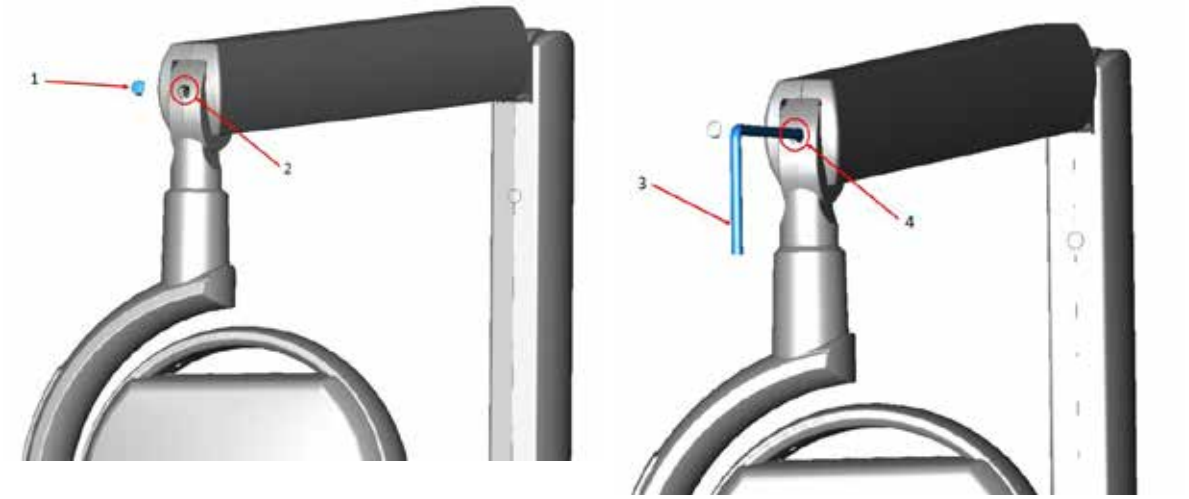

Fig. 5.31

1	Screw cap
2	Screw hole
3	Adjustment key
4	Adjustment screw

PLEASE NOTE

Please always remind to assembly again the screw caps on after springs adjustment.

INSTRUCTIONS (refer to Fig. above)

1. BALANCING THE SCISSOR ARM A

PLEASE NOTE

The SCISSOR arm is supplied with arm A spring already tensioned.
The arm B spring is supplied un-tensioned for safety reasons.

2. BALANCING THE ARM B

arm A vertical
arm B horizontal
insert the adjustment key in Y
tension the spring by turning the key clockwise 40 turns to start then turning further as needed to achieve optimum balance (do not go over 70 turns)
remove the key

3. CHECKING THE BALANCING

Move arm B in various positions

IF IT DOES NOT KEEP THE POSITION

Bring the arm B to the horizontal position
Insert the adjustment key in Y
Rotate the adjustment key by a half turn: clockwise if it tends to come down; counter clockwise if it tends to go up;
Remove the key

PLEASE NOTE

Repeat the tests and adjustments until arm B is steady and stable in all positions, even when the arm A is completely extended.

4. READJUSTMENT OF ARM A
bring the arm A to the vertical position
insert the adjustment key in X
rotate the adjustment key by half turn: clockwise if it tends to come down; counter clockwise if it tends to go up
remove the key

PLEASE NOTE

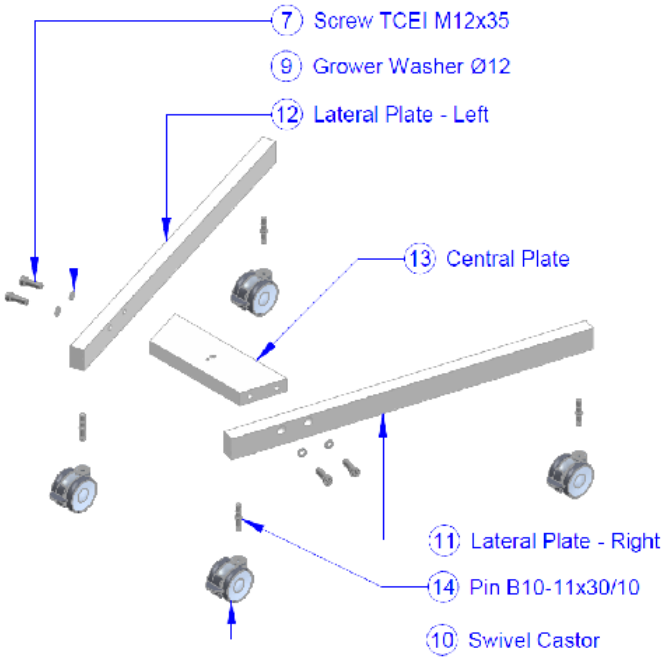
Repeat the test and adjustment until the arm A is steady and stable in all positions, even when the arm B is completely extended.

5.4. MOBILE VERSION

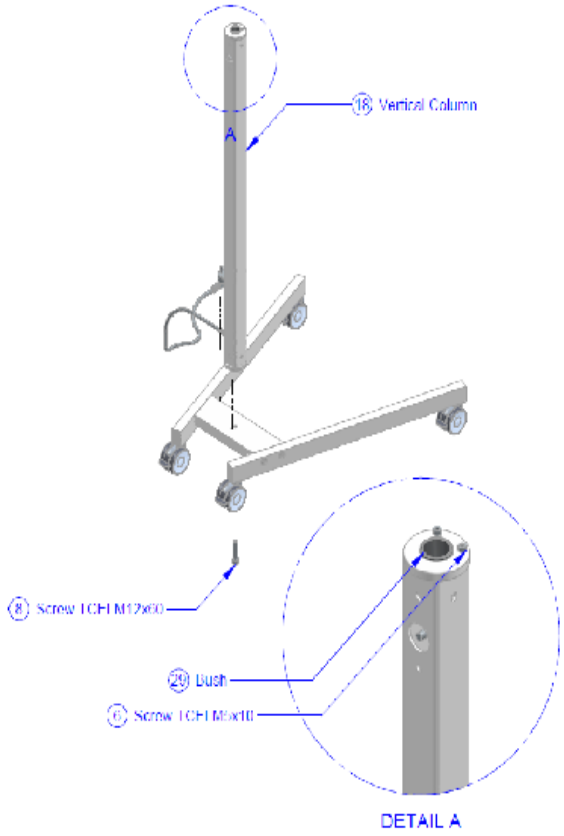
5.4.1. NEW INSTALLATION

ASSEMBLY INSTRUCTIONS:

STEP 1



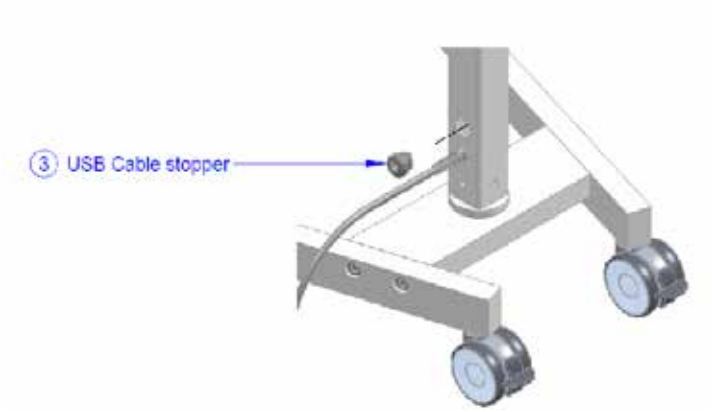
STEP 2



STEP 3

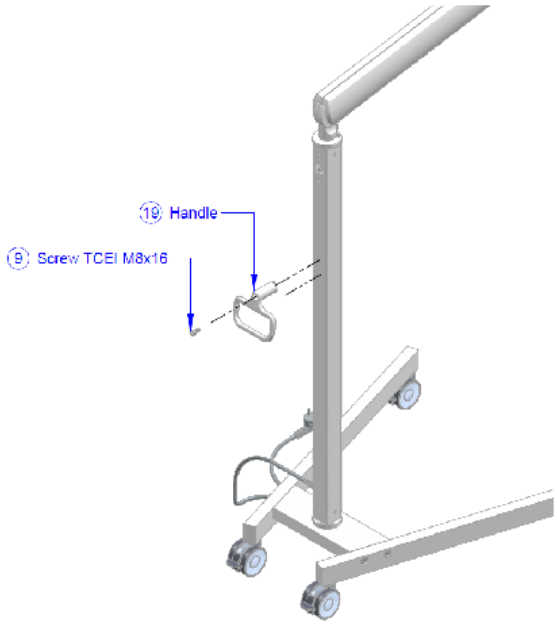
PLEASE NOTE

Mount the arm where its rotation should be limited by two provided screws (small angle)



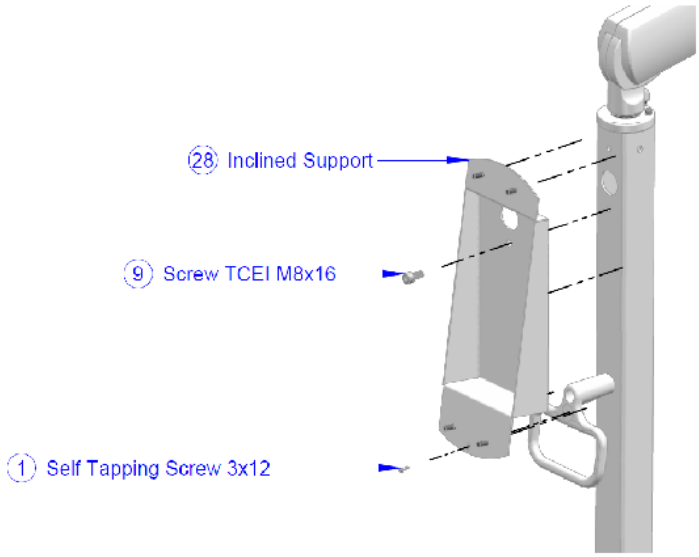
3 USB Cable stopper

STEP 4



19 Handle
9 Screw TCEI M8x16

STEP 5



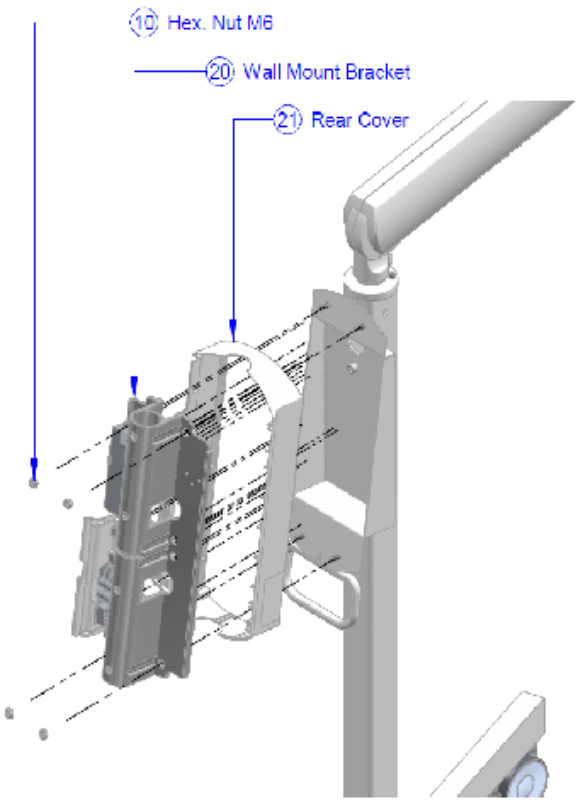
28 Inclined Support
9 Screw TCEI M8x16
1 Self Tapping Screw 3x12

PLEASE NOTE

Wrap the cables in the box (including USB repeater, if available)

STEP 6

STEP 7

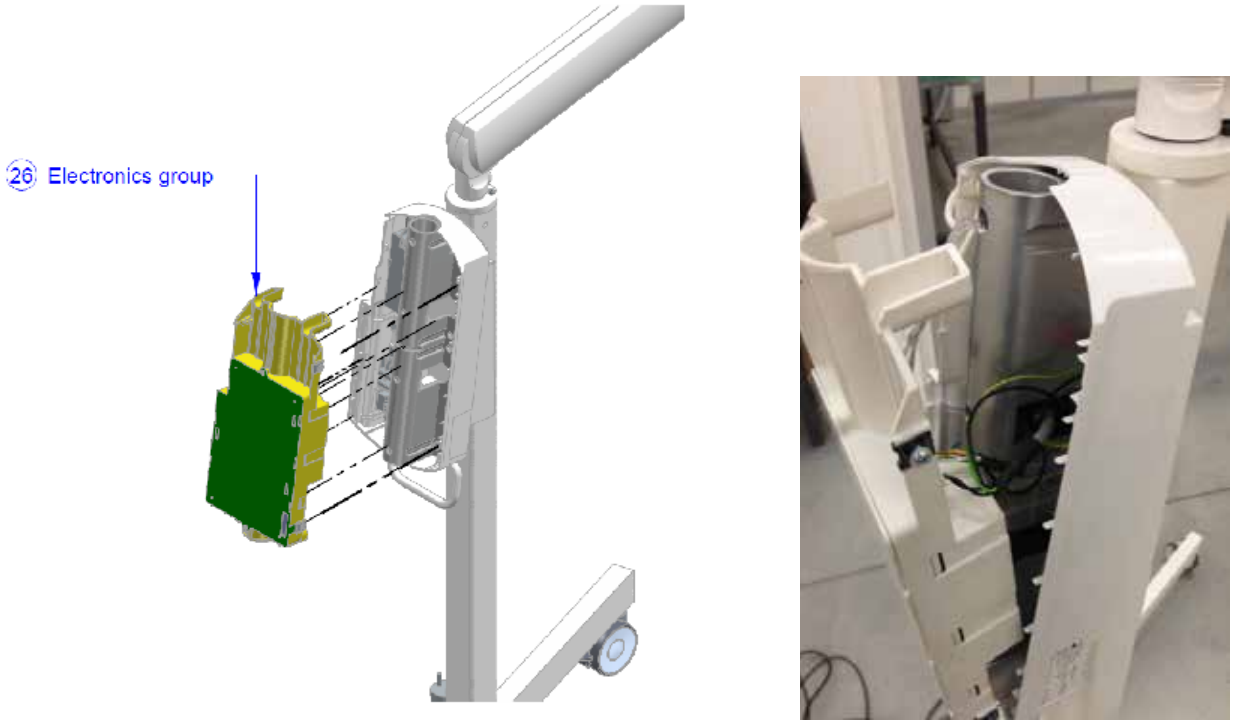


STEP 8

PLEASE NOTE

Attach the power and ground cables

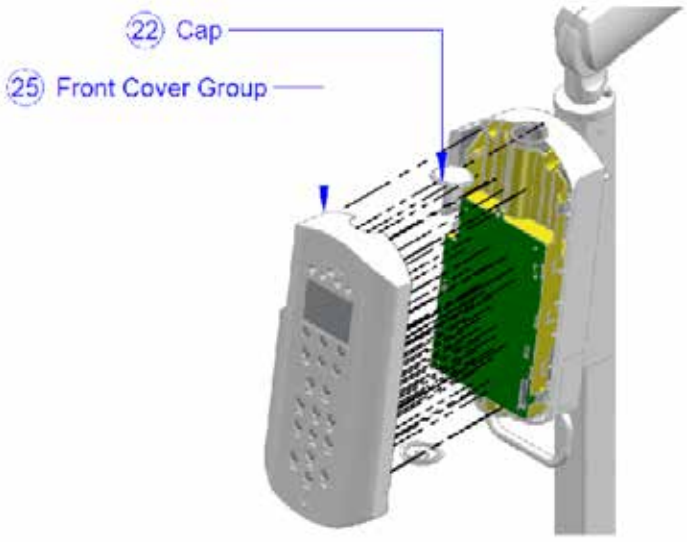
STEP 9



PLEASE NOTE

1) Connect cable connectors
2) Mount the «ELETTRONICA ASSY» on the frame

STEP 10



PLEASE NOTE

1) Connect the connectors between «COVER FRONTALE ASSY» and «ELETTRONICA ASSY»
2) Mount «COVER FRONTALE ASSY» with th caps

Check alignment of the additional cap with the empty space directed toward the pantograph arm

STEP 11

PLEASE NOTE

regulate the screws to fix and align the front cover of control unit

STEP 12 - DUMMY FUSE (METAL PIN) SUBSTITUTION - F2

Unscrew half turn counter-clockwise with flat screwdriver the fuse holder F2

Pull out fuse holder AND REMOVE THE DUMMY FUSE

insert the fuse supplied WITH THE MOBILE STAND KIT in the fuse holder

Screw half turn clockwise with flat screwdriver the fuse holder

5.4.2. CONVERSION OF WALL-MOUNTED TO MOBILE VERSION

To switch from wall-mounted to mobile version, you have to follow instruction as a new installation (see previous chapter) except in the case the timer has older version of SWITCH POWER BOARD (single fuse-holder).

If the timer has 2 slots for fuses, installation can proceed as explained in the previous chapter (MOBILE VERSION – NEW INSTALLATION).

Otherwise, if the SWITCH POWER BOARD has single fuse-holder:

Remove old board and replace it with new board supplied in the KIT
To swap boards disconnect mains and remove 2 screws on the right of the board. Replace it with the new one. Then fix board with 2 screws and reconnect the mains.
The item number of new board is 3.92.00824 SCHEDA UNITY LATER STAT RXLAT-.

5.5. ELECTRICAL CONNECTIONS

⚠ CAUTION

Before proceeding to connections, the power supply must be turned off.

⚠ CAUTION

Potentially lethal shock hazard!
Make sure the mains is disconnected before proceed with the following operations.

⚠ CAUTION

For electric safety, it is essential that the ground conductors are properly connected.

! WARNING

While performing the mains connections, always respect the polarity: PHASE/ NEUTRAL.

! WARNING

While stripping the cables, pay attention to the small copper wires that may fall on the printed circuit and cause short circuits or malfunctioning.

⚠ CAUTION

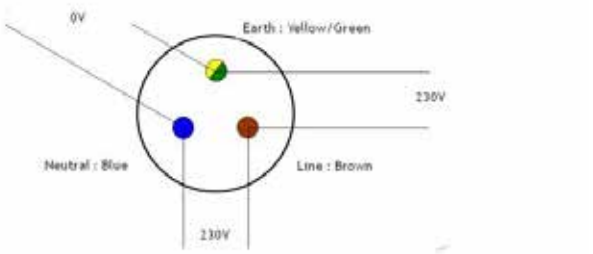
Check that the cable runs are arranged in the timer installation wall check the compliance of the power supply with the installation specifications referring to the dedicated chapter.

! WARNING

Always observe precautions and safety measures for handling electrostatic sensitive devices in order to avoid damages or malfunctioning in the electronic boards circuitry.

! WARNING

Check that the rating data of the Owandy-RX PRO match the power supply voltage.

EUROPEAN STANDARD	US STANDARD
	


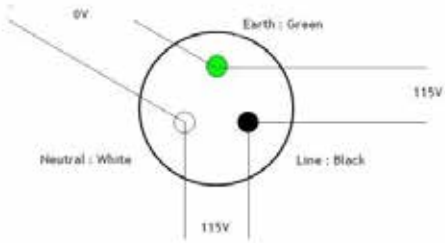


Fig. 5.32

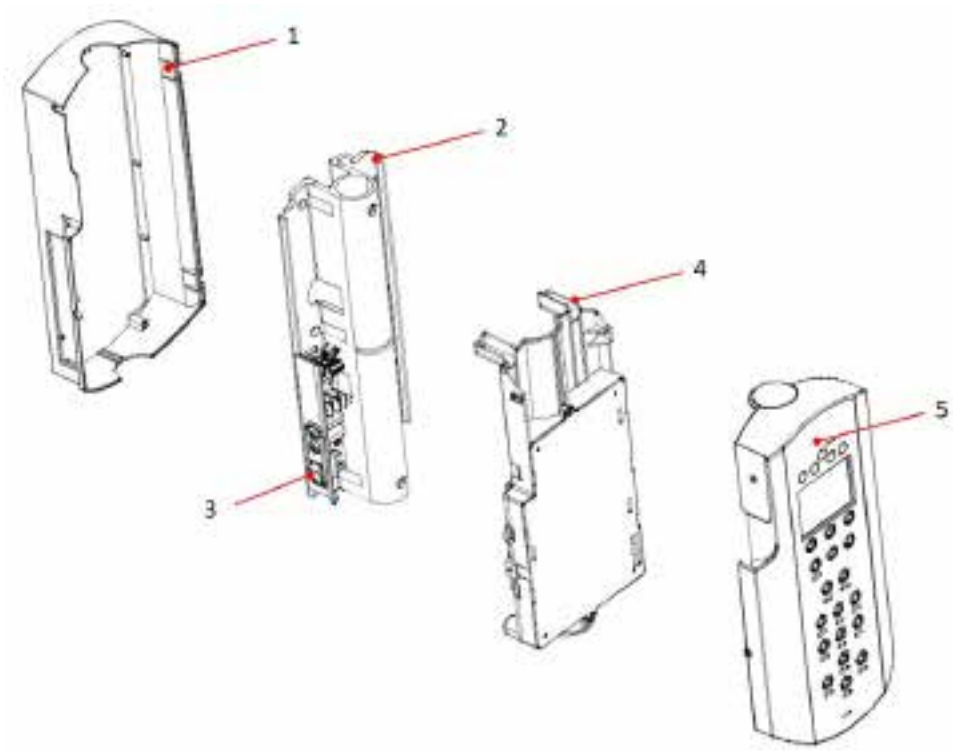
5.5.1. OVERVIEW OF THE INTERNAL PARTS OF THE TIMER

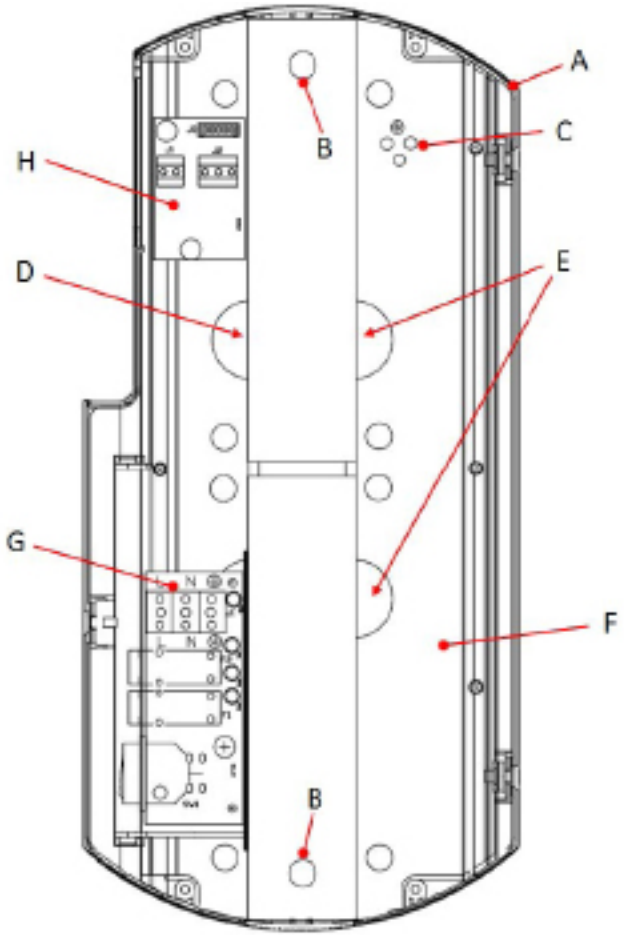


1	X-Ray control unit (Timer) back cover
2	Wall plate
3	Input power board
4	Control power board
5	X-Ray control unit (Timer) front cover and control display board

5.5.2. STEP 1 - CABLES ROUTING IN THE WALL PLATE

Before proceed with connecting and assembling the timer make sure that the routing of the cables has been made as indicated below.

WALL PLATE

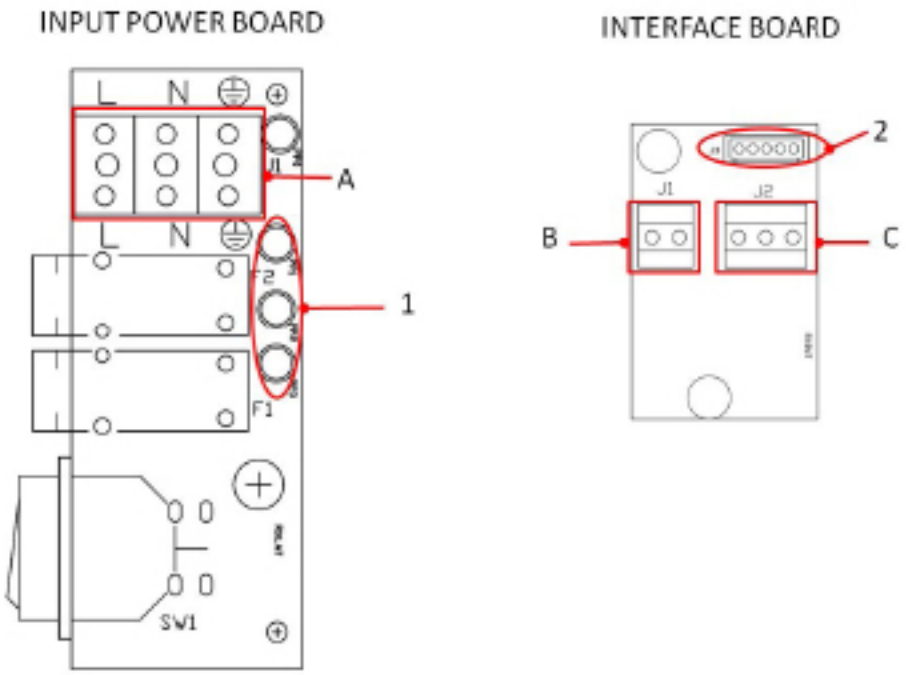


A. X-Ray control unit (Timer) back cover
B. Centering holes
C. Ground screws on plate for GND distribution and shield connection
D. Out of cables coming from wall: MAINS, LAMP, KEY2
E. Out of cables coming from the scissor arm: Ground, POWER CABLE and COMM. CABLE
F. WALL PLATE
G. INPUT POWER BOARD
H. INTERFACE BOARD

5.5.3. STEP 2 - CONNECTING INPUT POWER BOARD AND INTERFACE BOARD

Connect the cables of mains, Owandy-RX PRO remote exposure switch and Owandy-RX PRO light as described below before proceed assembling the next board.
Refer to the chart below for connections description.
For further details please check "ELECTRICAL SCHEME" chapter at the end of this manual.

INPUT POWER BOARD AND INTERFACE BOARD



IN	TERMINALS	OUT	CONNECTOR
J1 INPUT POWER BOARD - A	Power supply L (phase) - N (neutral) - GND (ground)	1	TO J4 CONTROL POWER BOARD
J1 INTERFACE BOARD - B	Owandy-RX PRO external light S1 (5) - S2 (4)	2 - J3 connector	TO J4 CONTROL POWER BOARD
J2 INTERFACE BOARD - C	Owandy-RX PRO remote exposure switch RED (1) - WHITE (2) - BLUE (3)	2 - J3 connector	TO J6 CONTROL POWER BOARD

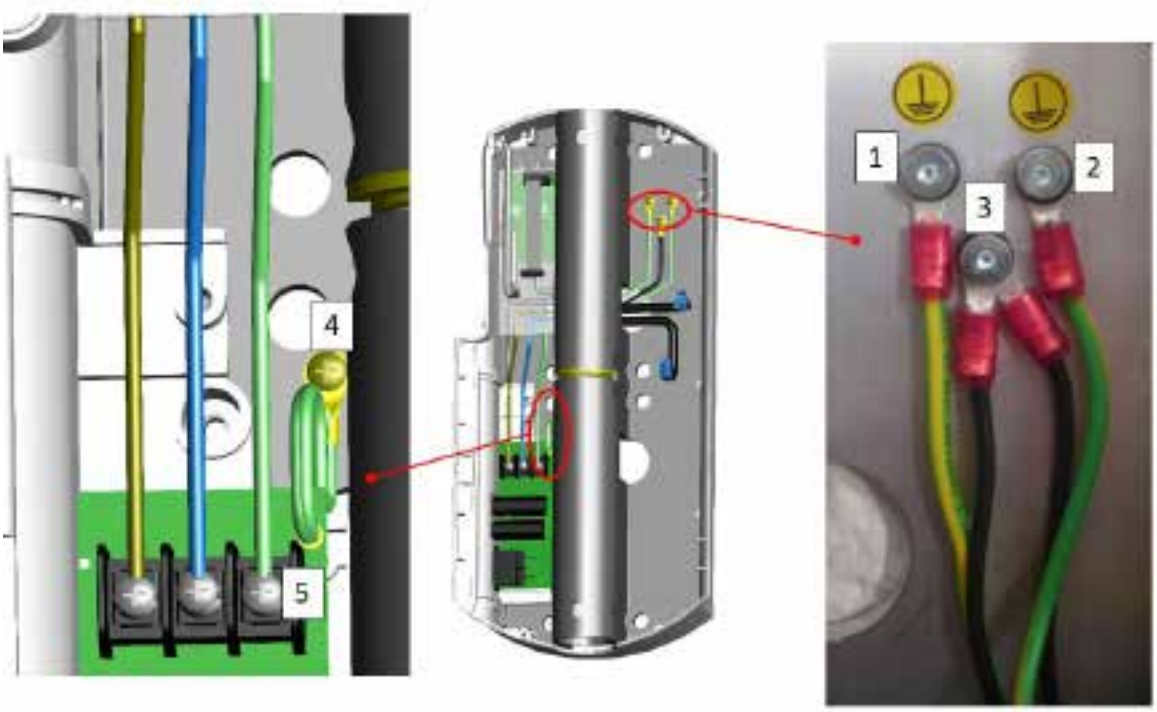
5.5.4. STEP 3 - GROUND POINT CONNECTION ON THE WALL PLATE

⚠ CAUTION

It is mandatory to connect and verify the proper and safe connection of all ground cables to the dedicated ground point and throughout the entire equipment. Refer to the specific chapter relevant to the electrical and wiring schemes

Refer to the image below for connecting.
For further details about GND connection please refer to the GND routing reported in the chapter "ELECTRICAL SCHEME"

GROUND CONNECTIONS



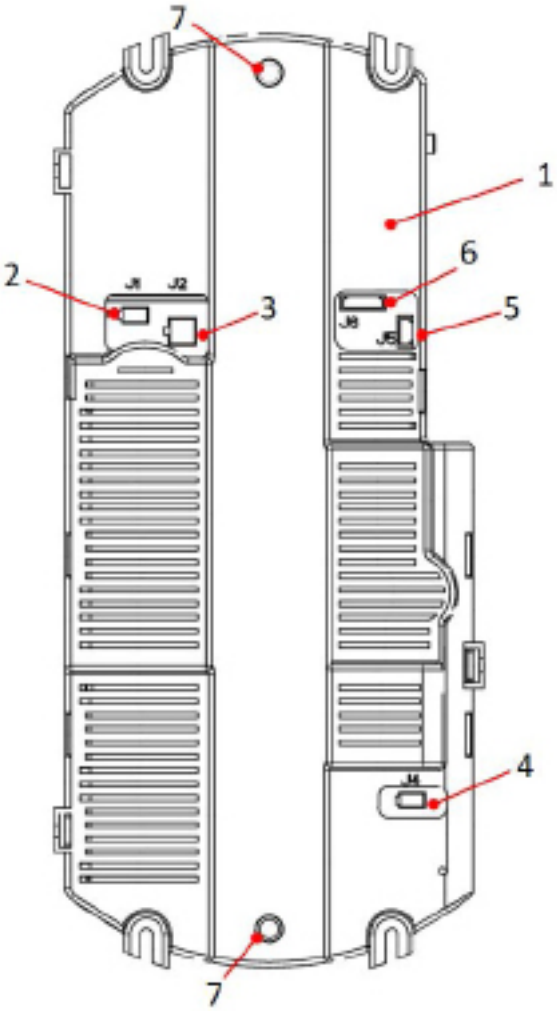
CABLE	CONNECTION DESCRIPTION
1. Ground cable coming from bracket.	GND connection between bracket and wall plate.
2. Ground cable coming from POWER CABLE.	GND connection between wall plate and tube head.
3. Shielded wires of PWR. and COMM. cables	Shielded connection to GND point on wall plate
4. Permanent connection of ground cable to INPUT POWER BOARD, it MUST be always connected to the ground point on the wall plate.	GND connection between INPUT POWER BOARD terminal and WALL PLATE.
5. Ground cable coming from mains power supply (facility electrical system).	GND connection between MAINS and INPUT POWER BOARD.

5.5.5. STEP 4 - INSTALL AND CONNECT REMOTE EXPOSURE SWITCH AND OWANDY-RX PRO LIGHT (OPTIONAL)

REFER TO CHAPTERS 6 and 7 for instructions otherwise proceed to the next step.

5.5.6. STEP 5 - CONNECTING CONTROL POWER BOARD

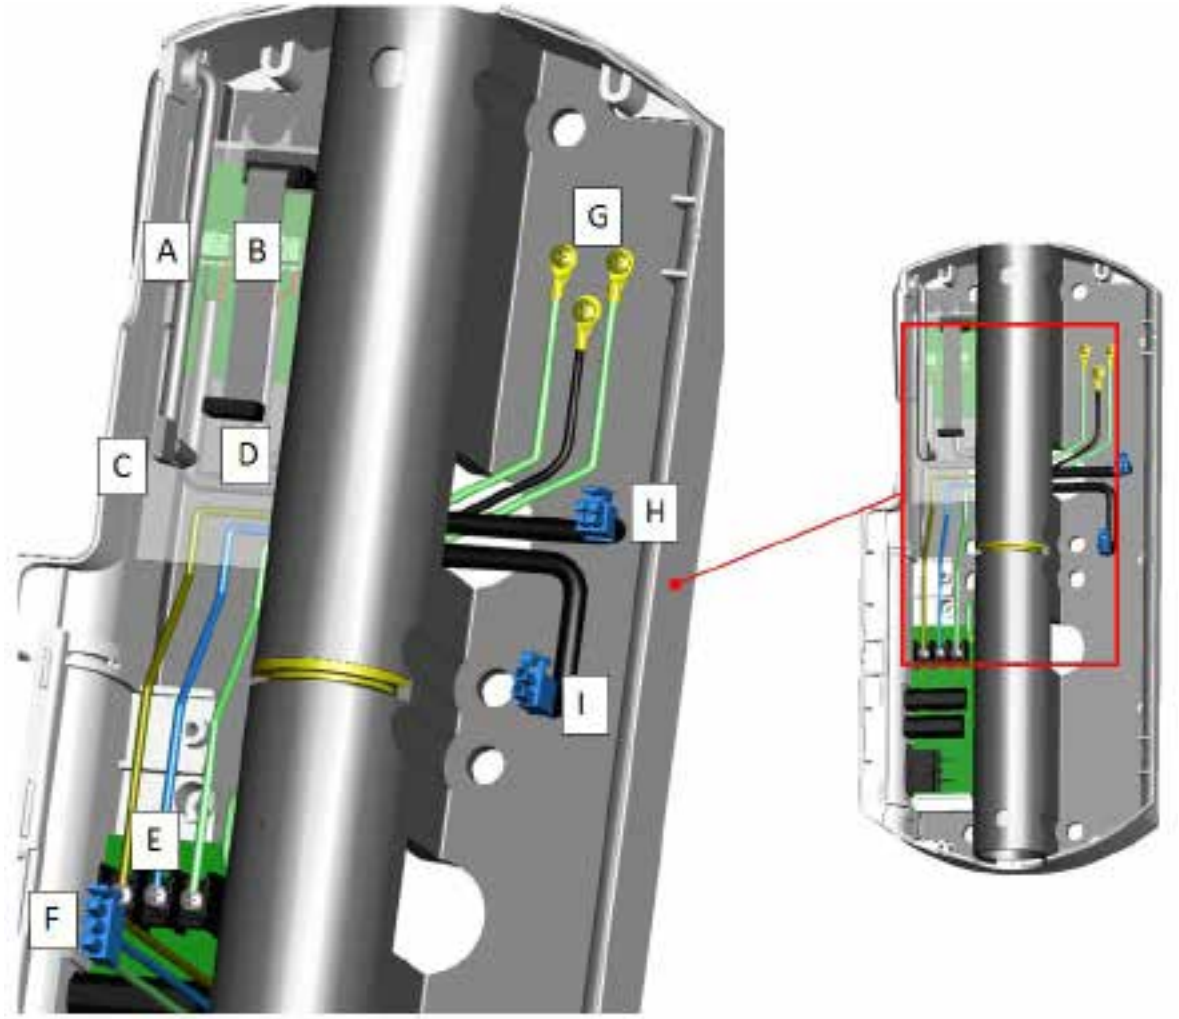
CONTROL POWER BOARD



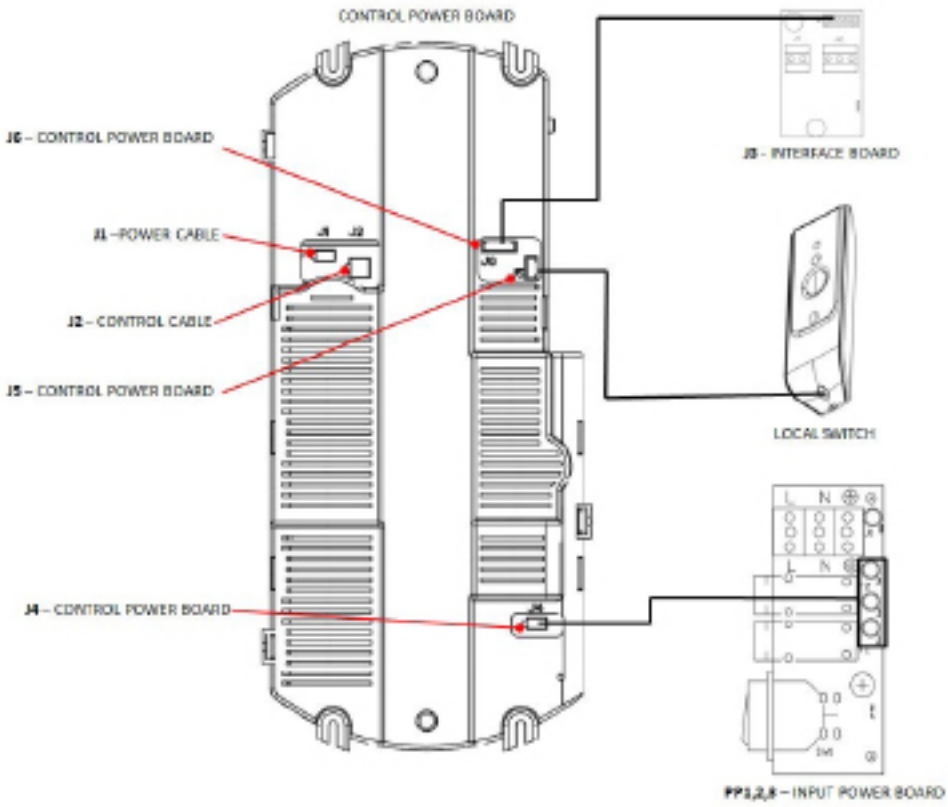
1	CONTROL POWER BOARD box.
2	J1 - POWER CABLE connector from ARM CABLE.
3	J2 - COMM. CABLE connector from ARM CABLE.
4	J4 - MAINS SUPPLY conn. from INPUT POWER BOARD.
5	J5 - Key 1 conn. from local exp switch.
6	J6 - Key 2 + Lamp conn. from INTERFACE BOARD.
7	Centering Pins.

5.5.7. STEP 6 - CONTROL BOX CONNECTIONS CHECK

Please verify that the connections in the control box comply to the scheme below.

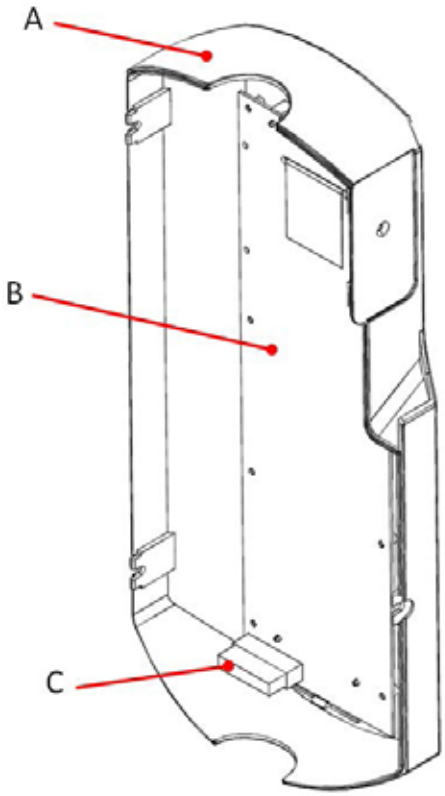


A. Exposure lamp connection (if installed)
B. Remote exposure switch (if installed)
C. Local exposure switch cable
D. Interface board flat cable connection
E. Mains supply connection and Permanent ground connection to the plate
F. Control Power Board mains supply connection
G. Ground cables from bracket and shielded wires
H. COMM. Cable from bracket (to J2 Control Power Board)
I. PWR. Cable from bracket (to J1 Control Power Board)



CONTROL POWER BOARD
J6 – CONTROL POWER BOARD
J1 –POWER CABLE
J2 – CONTROL CABLE
J5 – CONTROL POWER BOARD
J4 – CONTROL POWER BOARD
J3 - INTERFACE BOARD
LOCAL SWITCH
FP1,2,3 – INPUT POWER BOARD

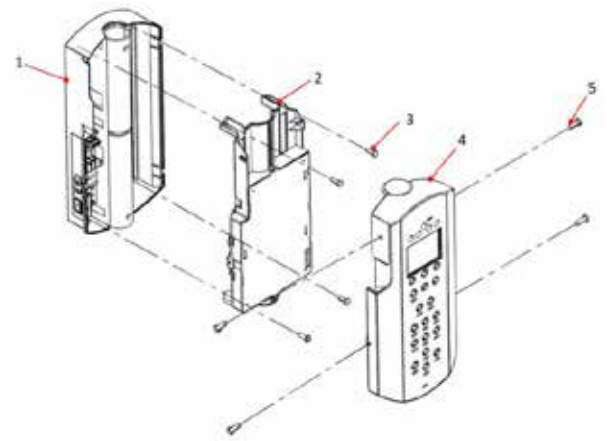
5.5.8. STEP 7 - CONNECTING CONTROL DISPLAY BOARD

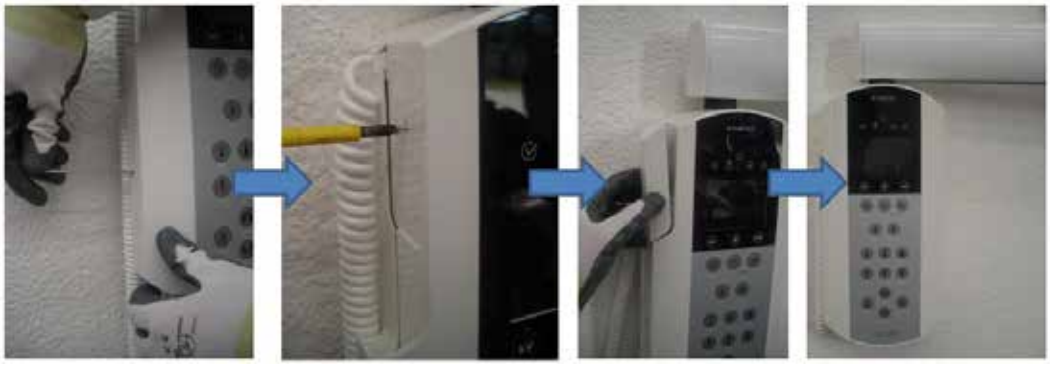


A. FRONT PANEL
B. CONTROL DISPLAY BOARD installed in the FRONT PANEL
C. Connect flat cable connector between CONTROL POWER BOARD and CONTROL DISPLAY BOARD

5.5.9. STEP 8 - ASSEMBLING THE TIMER

After arranged all the connections make sure you have assembled and installed all the 4 fixing screws of the timer referring to the pictures below.





PLEASE NOTE

Before closing the front panel of the control unit, please remind to insert the tube cap (A) on the opposite side where the bracket is installed.

BOTTOM MOUNT

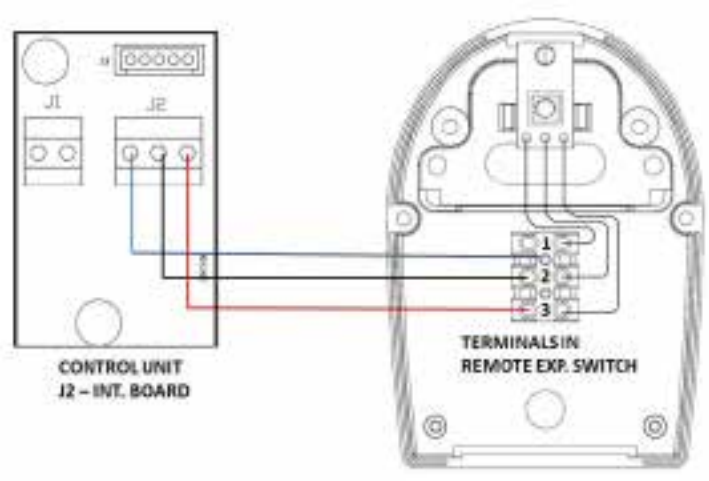
TOP MOUNT

6 CONNECT THE REMOTE EXPOSURE SWITCH (OPTIONAL)

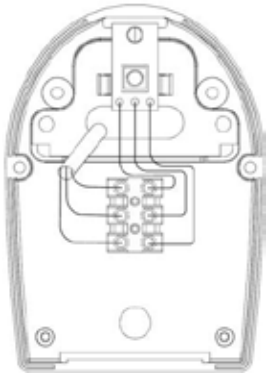
PLEASE NOTE

Maximum length of wires for installation of the remote exposure switch is 20 m (66 feet) and minimum section of the wires is 24 AWG (CSA/UL 300V/80°C)

1. Disassemble the Owandy-RX PRO remote exposure switch by unscrewing the 2 fixing screws (5).
2. Fix the back cover (2) to the wall by using the wall anchors (1) and Anchors screws (3).
3. Connect the wires to the terminal as indicated in the figure below, it is important to respect polarity. (For further details please refer to the wiring scheme in the chapter "ELECTRICAL SCHEME")



4. Arrange connections in the remote exposure switch as shown below, use the cable ties provided to fix the cable and always respect polarity.



5. Close the front cover (4) then screw in the fixing screws (5).

6. After finished the hardware installation it is necessary to properly configure the timer in order to enable the functioning of remote exposure switch.

7. Press and keep pressed keys kV and mA for 5 seconds till the message "SET" is shown on the display.

8. After a couple of seconds is shown the first parameter, in the bottom part of the display is shown the name of the parameter.

9. Use keys  to scroll parameters.

10. When it is shown the parameter "REMOTE BUTTON" press  key to enable modification.

11. Icons  start blinking.

12. Use keys  to scroll available settings and select ON or OFF.

13. Press  key to confirm and save the selection.

14. Press  key to exit from menu.

15. START UP

⚠ CAUTION

When all the connections are completed, the installer must check the electrical safety and functions of the system.

⚠ WARNING

Before switching on the system, verify that the mains value is within the range reported on the label of the device.

INSTRUCTIONS

	Toggle the main switch (1) located on the left part of the timer to the "I" position (ON) The display will light up
 Fig. 6.2	The "ready" green light turns on indicating that the system is powered and ready for exposure according to the loading factors indicated in the control panel display-. The leds of the set parameters automatically light up. The exposure time is shown on the display.

⚠ CAUTION

If an error is detected when the system is turned on, the anomaly is indicated as follows:
- Intermittent beeping sound

- Intermittent flashing of the MALFUNCTIION indicator 
- the error code (E ....) appears on the display (refer to "ERRORS" Chapter)
- all the control panel functions and x-ray emission are inhibited

In this case it is possible to reset the error pushing the "memo" key or turn off the timer and then turn it back on. If the error happens again and it is not possible to restore it, call your local Owandy Radiology customer service.

PLEASE NOTE

The exposure time and parameters which appear on the display are the last that were set before the timer was turned off.

PLEASE NOTE

If the timer remains inactive for a few minutes, it switches to the stand-by mode.
Press any key on the control panel to restore it to the operative armed mode.

16. CONFIGURATION

The "Owandy-RX PRO" x-ray system is factory configured in "standard mode".
On the control panel, the led relevant to the following exposure parameters will light up:

	Ready for x-ray exposure (Armed mode)
	X-Ray Exposure Time selected
	Type of cone installed (rectangular or circular shaped x-ray beam output)
	SSD distance 20 [cm] (8") = SHORT CONE (circular or rectangular) 30 [cm] (12") = LONG CONE (circular or rectangular)
	X-ray tube voltage 60kV / 65kV / 70kV
	X-ray tube current 4mA-7mA
	Selection of the x-ray detector support type : F-d : FILM, D Speed F-e : FILM, E Speed F-f : FILM, F Speed Dig : Digital X-Ray Sensor PSP : Phosphor plates

The following exposure times [s] are available in the Owandy-RX PRO:

0.020 – 0.025 – 0.032 – 0.040 – 0,050 – 0.063 – 0.080 – 0.100 –0.125 – 0.160 – 0.200 – 0.250 – 0.320 – 0.400 – 0.500 –0.630 – 0.800 – 1.00 – 1.250 – 1.600 – 2.000 s

PLEASE NOTE

These times are in compliance with IEC 60601-2-7 standard according to the 2nd and 3rd edition of the IEC 60601-1 and with the ISO 497 series R'10 recommendations.

PLEASE NOTE

These values of the programmed exposure times MAY NOT be modified.

Certain exposure values have been predefined which depend on the selection of the operating parameters:
- cone (8"/12")
- type of patient (ADULT/CHILD)
- x-ray technique
i- ntra-oral exam

PLEASE NOTE

If one so desires, it is possible to change these values by means of the dedicated key buttons previously indicated.

Possible modifications of the exposure values:
- x-ray anodic voltage (typical: 60kV/65kV/70kV)
- x-ray anodic current (typical: 4mA/6mA/7mA)
- type of patient (ADULT/CHILD)
- x-ray technique

—> refer to chapter 5

Possible modifications of the parameters:
- Number of exposure switches
- Cone size (20cm - 8" / 30cm - 12")
- Cone type (Square / Round)

6.1. ADVANCED SETTINGS MENU (SERVICE ONLY)

WARNING

This procedure can be used only by authorized and trained technician.
"Owandy Radiology" shall not be held liable for misuse of the information provided in this chapter.

It is available an advanced settings menu for SERVICE that allows only the authorized Installer to set and verify some parameters of the device.

1. Press and keep pressed keys 

and 

for 5 seconds till the message "SET" is shown on the display.

2. After a couple of seconds is shown the first parameter, in the bottom part of the display is shown the name of the parameter.

3. Use keys  to scroll parameters.

4. When it is shown the desired parameter press  key to enter the under menu.

5. Icons  start blinking.

6. Use keys  to scroll available settings.

7. Press  key to confirm and save the selection.

8. Press  key to exit from menu, or wait some seconds without pressing buttons to automatically exit.

SERVICE MENU - AVAILABLE SETTINGS

IDENTIFICATION	DESCRIPTION	RANGE	CUSTOMIZABLE

7 INSTALLATION CHECK

PLEASE NOTE

After the completion of the installation of the Owandy-RX PRO, the installer technician MUST fill in the form contained in this document to certify that the device has been correctly installed.
The Installation Checklist Form must be completely filled in all the details, stamped and signed by the installer technician and must be sent by e-mail to Owandy Radiology: **export@owandy.com**
Owandy Radiology. reserves the right to reject the filled Installation checklist Form if not correct or complete in each part or with any test not passed: in these cases, or if the form has not been sent to Owandy Radiology, any kind of right of the user will be automatically off, including any kind of responsibility of the manufacturer.
Any future claims and/or complaint will be considered null and void.
Make 3 copies of the filled in form:

- One for Owandy Radiology (soft copy)
- One for the User (keep it with the device documentation)
- One for the Dealer (installer technician)

PLEASE NOTE

If you encounter problems that don't allow to correctly pass the tests or you have any doubt for the correct installation of the equipment, contact immediately your referring technician or the manufacturer: **export@owandy.com**
Since the authorized installer technician is in charge to perform the installation and tests of the Owandy-RX PRO, he/she has the full responsibility of the correct installation of the equipment.

8

CHECKING TO EXPOSURE FACTORS

⚠ WARNING

During these procedures X-rays will be emitted! Please take all precautions in order to avoid accidental exposure to ionising radiation!

8.1. CHECKING THE X-RAY TUBE VOLTAGE (KV)

The radiographic voltage is measured using a calibrated "non-invasive" instrument.
Please refer to your local regulatory body for dedicated test specifications.
Please check «TECHNICAL DATA» chapter for reference values.

8.2. CHECKING THE X-RAY TUBE CURRENT (MA)

The radiographic current is measured by connecting a multimeter to the 2 test points available in the fork.
Following the instructions below to perform this measure.

INSTRUCTIONS

	1. Remove fixing screw located at bottom side of the fork.
 	2. After removed the screw, move back and slide down the bottom cover of the fork.

	3. Connect the multimeter on the 2 test points and set the instrument on VDC mode. Take an exposure long at least 1 sec. and read the value displayed. 4. To know the mA value apply this conversion to the value read on the multimeter: 1 VDC = 1 mA

PLEASE NOTE

The type and location of test point could be different basing on production necessity.

Please check with your local regulatory body for specific test specifications.

WARNING

Re-installing Sopix/Sopix² Inside, follow carefully installation and connection instructions as reported in its dedicated installation manual.

WARNING - CAUTION

Remove the fork cover ONLY to check the X-ray tube current.
In normal condition of use, NEVER operate the device or leave the device without the presence of the lateral enclosure of the fork (example shown in the picture below) or without the proper fixing of the enclosure on the fork.

9 DIAGNOSTIC

9.1. X-RAY CALIBRATION PROCEDURE

⚠ CAUTION

Perform this operation only if necessary or suggested by the Technical Support Service
During this operation x-rays will be emitted!
It is mandatory to adopt all the safety measures relevant to radioprotection.

Here below these instructions will explain how to perform X-ray tube calibration procedure.

1. Press and keep pressed key mA 

for 5 seconds until message "TUBE CALIBRATION" appears on the display

2. Take a safety position far from the x-ray beam, press and keep pressed the exposure key  .

On the display will appear "CAL. IN PROGRESS" message, Exp. Led  is lit and an intermittent acoustic sound is emitted.

3. At the end of the procedure, acoustic sound stops and on the display appears "CAL. SUCCESS" message.
4. After waiting the pause time (it will be longer than the normal rest time), the timer back to standard functioning and it is ready for a new exam.

PLEASE NOTE

The calibration procedure takes about 50s

After this procedure, PAUSE led  *is blinking and all the functions are inhibited. Please wait until it completes the cooling time due to the tube calibration before perform any further operation.*

10 ERROR MESSAGES

In case of malfunctioning or error events, the display will show an error code together with acoustic signals (5 beeps). Furthermore an error symbol code is shown on the display, warning the operator about the error status. All functions are inhibited until the error status is fixed or restored.

Some errors can be cleared by pressing the reset button  on the keypad.
The following chart gives a list of error messages that may appear while the Owandy-RX PRO radiographic system is working.
Error codes are made by letter "E" followed by a number that identifies unit in fault (timer or tubehead) and other 2 numbers that identify the error.
Unit number:

"1": Fault it is located in the timer (control unit)
"2": Fault it is located in the tubehead

Code	Message	Description	Resettable
E101	memory fail	EEPROM fault	NO
E102	memory fail	I2C bus EEPROM fault	NO
E103	memory fail	EEPROM DMA readings fault	NO
E104	memory fail	EEPROM DMA writings fault	NO
E105	no response from generator	Lost communication between inverter and generator	NO
E106	wrong response from generator	NAK response from inverter	YES
E107	emission start fail		YES
E108	emission too long		YES
E109	button released beforehand		YES
E110	wrong use of button	Button pressed while Owandy-RX PRO is not in ready (armed)	YES
E111	keyboard pressed at boot	Keyboard pressed during boot time	NO
E112	button pushed at boot	Exposure button pressed beforehand	NO
E113	wrong use of keyboard	Keys pressed during an exposure	YES
E114	button release timeout	Exposure button released beforehand after an exposure	YES
E115	wrong parameters in generator	Exposure parameters (kV, mA, exposure time, mode) does not match with the ones set in the control box	YES
E116	generator reset during emission	inverter has been resetted during an exposure	YES
E117	calibration start fail	Calibration	YES
E118	calibration too long	Calibration tme too long	YES
E119	button pushed during cooling	Exposure button pressed beforehand pushed during a functionality exposure	YES
E120	cooling time disabled	Functionality pause disabled	YES
E121	button pushed during stand-by	Exposure button pressed beforehand during stand-by	YES

E122	memory fail	Parameters out of range	NO
E123	power relay fail	power relay failure (relay OFF)	NO
E124	power relay fail	power relay failure (relay ON)	NO
E125	power board fail	power board failure	NO
E126	power board fail	power board failure	NO
E127	power board fail	power board failure	NO
E128	power board fail	power board failure	NO
E129	wireless unit not connected	wireless receiver board not connected	YES
E132	system error	hardware error	NO
E201	generator memory	Inverter EEPROM error	NO
E202	generator memory	Inverter I2C EEPROM error	NO

Code	Message	Description	Resettable
E203	generator memory	Inverter EEPROM DMA readings fault	NO
E204	generator memory	Inverter EEPROM DMA writings fault	NO
E205	generator not calibrated	Calibration not yet done	YES
E206	tube voltage too low	Anodic voltage too low	YES
E207	tube voltage too high	Anodic voltage too high	YES
E208	electrical discharge on hv		YES
E209	tube current too low	Anodic current too low	YES
E210	tube current too high	Anodic current too high	YES
E211	filament voltage too low	Filament voltage too low	YES
E212	filament voltage too high	Filament voltage too high	YES
E213	tube unit not connected	High voltage unit not connected	NO
E214	button released beforehand	Enable signal released beforehand during an exposure	YES
E215	generator internal power supply	12V internal voltage too low	NO
E216	generator internal power supply	12V internal voltage too high	NO
E217	generator mode	Wrong exposure enabling signal activation	YES
E218	safe circuit fail	Security interlock fault	NO
E219	tube current too low	Mean anodic current too low	YES
E220	tube current too high	Mean anodic current too high	YES
E221	no tube voltage feedback	Missing HV feedback	NO
E222	ACE acquisition fail	X-rays not detected by Sopix	YES
E223	tube unit temperature too high	Monoblock over temperature	YES
E224	tube unit temperature too low	Monoblock under temperature	YES
E225	tube unit temp. sensor fail	Monoblock temperature sensor fault (open circuit)	YES
E226	tube unit temp. sensor fail	Monoblock temperature sensor fault (short circuit)	YES
E227	voltage reference fail	generator voltage reference too low	YES
E228	voltage reference fail	generator voltage reference too high	YES
E232	system error	hardware error	NO

For the errors that can't be cleared by the reset button on the keypad, please contact your installer or your local Owandy Radiology customer

11

SUGGESTED MAINTENANCE AND REPAIR

In order to guarantee safety of the radiographic system, it is necessary to set up a maintenance schedule. Additional information relevant to the mandatory maintenance can be found in the Maintenance Instructions of the Owandy-RX PRO. The RESPONSIBLE ORGANIZATION is responsible for organising and observing a maintenance schedule which must be executed by qualified technicians who must be able to certify their work with a "Declaration of Conformity".

⚠ CAUTION

Please contact your local state regulatory body for information regarding inspection schedules for this x-ray.

⚠ CAUTION

- *To ensure patient's and operator's safety and high image quality, the device must be well maintained as described in the accompanying documents every time it is needed. For other maintenance operations, refer to the installation and maintenance manual and to the maintenance guide supplied.*
- *The RESPONSIBLE ORGANIZATION of the device is responsible for scheduling and having preventive maintenance carried out at least every 12 (twelve) months, which consists in maintenance carried out by qualified, authorised professional technicians. It is the RESPONSIBLE ORGANIZATIONS's responsibility to arrange for this service and to assure that the personnel performing this are fully qualified to service Owandy-RX PRO x-ray equipment.*
- *The RESPONSIBLE ORGANIZATION must carry out routine controls on a daily basis to ensure optimal device performance. These checks must be performed also to complete the installation of the Owandy-RX PRO X-Ray System and as part of the recommended maintenance as indicated in the accompanying documents. Failure to perform these checks may result in an installation that does not comply with U.S. Radiation Performance Standards 21 CFR Subchapter J.*
- *The manufacturer shall not be held liable for damage or injuries caused by failure to carry out inspections or acceptance tests or by incomplete maintenance.*
- *Repairs and replacements of any component must be carried out solely by authorised and highly qualified personnel and only using genuine spare parts supplied by Owandy Radiology.*
- *Do not operate the unit if there is the threat of an earthquake. Following an earthquake, ensure that the unit is operating properly and it's mandatory to check it before completely under any aspect before using it again. Failure to observe this precaution may expose patients an environment to hazards.*

⚠ CAUTION

For Italy: Medical electrical equipment malfunctions resulting from incomplete or inadequate maintenance can cause serious adverse events[1].
For Italy refer to Presidential Decree 14/01/1997, Legislative Decree No. 81/2008 (as subsequently amended and modified).

11.1. CLEANING THE OUTER SURFACE

Clean the external surface using a damp cloth and non-corrosive and non oil-based detergent and disinfect it using a

non-aggressive medical detergent. Do not spray detergent or disinfectant directly on the device. The spacer cone may be cleaned with cotton wool soaked with surgical alcohol.

⚠ CAUTION

- *Turn off and disconnect the device from the supply mains before carrying out cleaning operations.*
- *Do not spray products directly on the device. Apply the product on a clean cloth.*
- *Always use disposable protective covers for the applied parts.*
- *Do not use UV systems to disinfect the equipment, as exposed parts of the device can turn yellow or discolour.*
- *To avoid any potential hazard or danger to operators and patients, contact your authorized Owandy Radiology Technical Representative immediately if you experience any unusual operation, mechanical issues, or equipment malfunction*

11.2. DISPOSAL

The WEEE symbol ▬ indicates that, at the end of its lifespan, the product must be disposed of separately from other waste, in compliance with Directive 2002/96/EC.
Refer to the implementation standards in your country. EU Council Directive 2002/49/EC (WEEE) defines a common approach intended to avoid, prevent or reduce harmful effects due to the exposure to environmental noise and to the disposal of electric and electronic equipment. This product is marked with the symbol shown above. This product must not be disposed of together with domestic waste. It must be taken to a special waste collection centre to be recovered and recycled. The crossed-out wheelie bin identifies a product placed on the market after the 13th of August 2005 (see IEC EN 50419:2005). This product is subjected to Council Directive 2002/96/EC (WEEE) and national implementation standards. Refer to your supplier for the disposal of this product.

Proper disposal of this product will help protect the environment.
For further details on the disposal of this product, please contact local authorities, the provider of the domestic waste disposal service or the outlet where you have purchased it.

11.3. MAINTENANCE INSTRUCTIONS

1. Turn the main power switch to «OFF»
2. Release the spring of the arm B of the SCISSOR arm using the enclosed scissor arm key
3. Remove the tube head
4. Remove the wall plate guard
5. Remove the terminal board cover and disconnect the SCISSOR arm cable
6. Remove the bracket plug and the guard slab
7. Remove the SCISSOR arm and its cable from the bracket
8. Remove the bracket from the wall plate
9. Check the vertical alignment of the wall plate: adjust if required
10. Check the six fixing screws of the wall plate: tighten if required
11. Clean the old lubricating grease from the bracket shaft: should the bracket shaft be damaged, install a new bracket
12. Clean the old lubricating grease of the bracket bushing: should the bracket bushing be damaged, install a new bracket
13. Grease the bracket shaft (use only the type specified by the Owandy Radiology!!)
14. Lubricate the bracket bushing with lubrication grease (use only the type specified by the Owandy Radiology!!)
15. Install the bracket in the wall plate
16. Check the SCISSOR arm cable: should it be damaged, send the SCISSOR arm to Owandy Radiology for repairs
17. Check the SCISSOR arm guards
18. Replace the damaged guards
19. Clean the old grease from the shaft: should the shaft be damaged, send the SCISSOR arm to Owandy Radiology for

repairs (see page 3 for contact info)
20. Lubricate the SCISSOR arm shaft with lubricating grease (use Molikote D grease ONLY as specified by the manufacturer) and reposition it in the bracket
21. Reinstall the SCISSOR arm cable in the bracket and the wall plate, connect it to the terminal board and reinstall the terminal board cover
22. Position the guard slab in the bracket
23. Position the bracket plug
24. Position the plate guard
25. Check the electric contact of the tube head: if damaged, send the tube head to Owandy Radiology for repairs (see page 2 for contact info)
26. Clean the old grease from the tube head assembly shaft
27. Grease the assembly shaft of the tube head with a thin layer of lubricating grease (use Molikote D grease type ONLY)
28. Position the tube head again
29. Re-tension the spring of the SCISSOR arm B using the scissor arm key provided
30. Turn unit on and check the correct operation of the radiographic system

PLEASE NOTE

Please refer to Maintenance Instructions document of the Owandy-RX PRO for more details.

11.4. REPLACEMENT OF FUSES

CAUTION

Potentially lethal shock hazard!
Make sure the mains is disconnected before proceed with the following operations.

Depending by the installation type, the x-ray control unit of the Owandy-RX PRO is equipped by 1 or 2 fuses located on the electronic board reachable from the outside by means of a flat screwdriver.

1. Single Fuse (Live): wall mounting version-permanently installed
2. Double Fuse (Live and Neutral): mobile version of the Owandy-RX PRO.

CAUTION

Respect exactly the ratings and the characteristics of the fuses as stated in the labels and accompanying documents.

To replace them proceed as follows:

1. Locate the fuses and main switch at left-bottom side of the timer.

F1= Live Fuse
F2= Neutral (installed only on Owandy-RX PRO mobile unit versions)

2. Turn the power off putting the mains switch on "0"
3. Using a flat screwdriver unscrew (anticlockwise) the fuse holder and replace the fuse.

4. Remove the fuse

5. Replace the fuse with same rated fuse type

MANUFACTURERS RATING PLATE	100 - 240 VAC
FUSES F1 type - 5x20	T10A H 250V
FUSES F2 type - 5x20	T10A H 250V

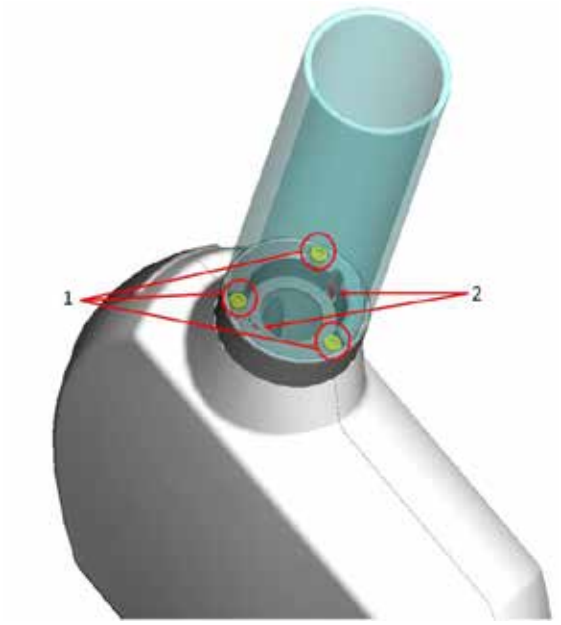
6. After replacement, screw in the fuse holder to close it.

7. Turn the power back on

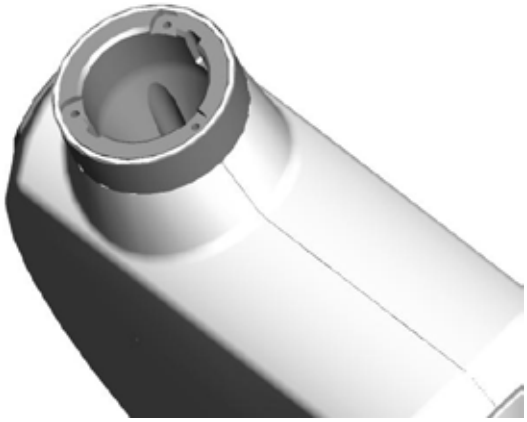
11.5. CHANGING THE BEAM LIMITING DEVICE (COLLIMATOR CONE)

11.5.1. ROUND CONE (SHORT AND LONG)

To disassemble the round cone (both short and long) it is necessary unscrew the 3 screws located at the base of it.
For long cone it is necessary the long Allen key provided with the system.
To fix the cone it is enough screw in the 3 screws.
Always pay attention to the orientation of the cone, there are two sites (2) in order to center the cone on the screws (1).
Here below an image shows location of the screws.

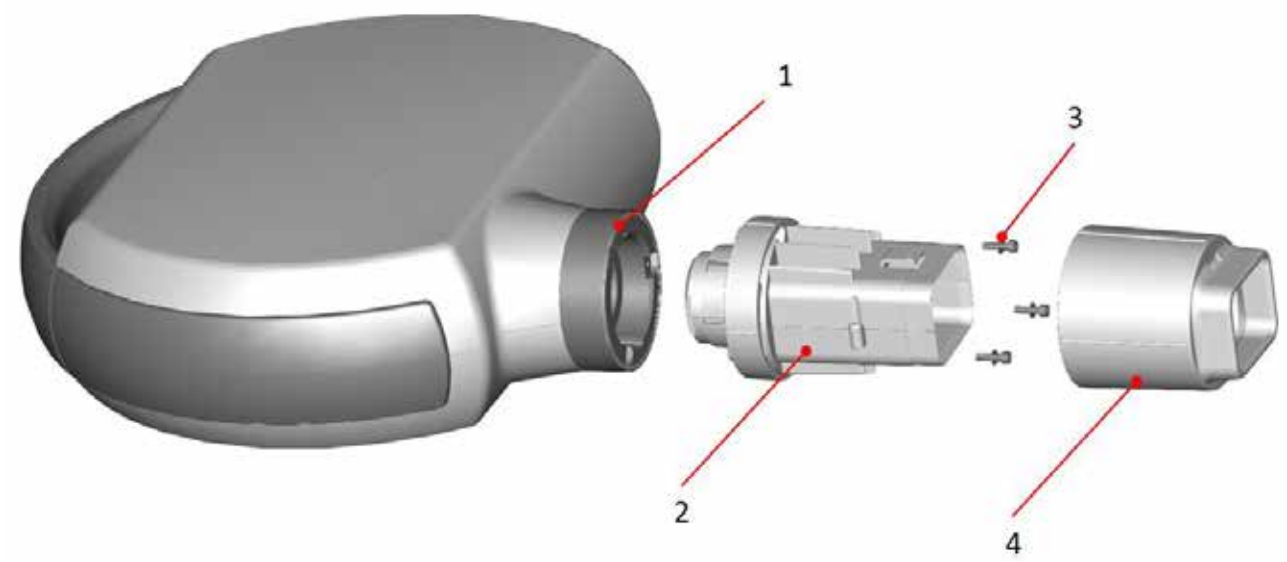


Cone disassembled



11.5.2. RECTANGULAR CONE

Rectangular cone parts:



1	Tubehead cone support
2	Internal part (beam limiter)
3	Fixing screws (x3)
4	Beam Limiting Device cover

NSTRUCTIONS TO ASSEMBLE RECTANGULAR CONE

	Disassemble the existing cone. Take out the rectangular cone and disassemble the cone cover from beam limiter unit in order have access to fixing screws.

	Fix the beam limiter unit to cone support by means of the 3 screws provided.
	Install the cone cover on the beam limiter by pushing it on the 2 flaps until hear the click of right assembling. Lightly try to pull out the limiter assembly in order to check stability.
	The square cone properly installed should be able to rotate and not easily coming out.

INSTRUCTIONS TO DISASSEMBLE RECTANGULAR CONE

	Disassemble the cone cover by pressing on the 2 blocks. After unlocked it, pull out the cone cover.

	Rotate the internal part of the cone in order to reach the fixing screws.
	Once unscrewed the 3 fixing screws remove the internal part of the cone.

11.5.3. MODIFY INSTALLED BEAM LIMITING DEVICE IN OWANDY-RX PRO CONTROL UNIT

After completed mechanical operations of replacement of the cone, follow the instructions below to modify CONTROL UNIT configuration and select the cone installed.
To modify cone selection it is necessary enter in the dedicated "SERVICE" menu.

It is available an advanced settings menu for SERVICE that allows only the authorized Installer to set and verify some parameters of the device.

9. Press and keep pressed keys 

and 

for 5 seconds till the message "SET" is shown on the display.
10. After a couple of seconds is shown the first parameter, in the bottom part of the display is shown the name of the parameter.

11. Use keys  to scroll parameters.

12. When it is shown the parameter "CONE TYPE" press  key to enable modification.

13. Icons  start blinking.

14. Use keys  to scroll available settings,  rectangular or round,  short or long (only for round type).

15. Press  key to confirm and save the selection.

16. Press  key to exit from menu.

⚠ CAUTION

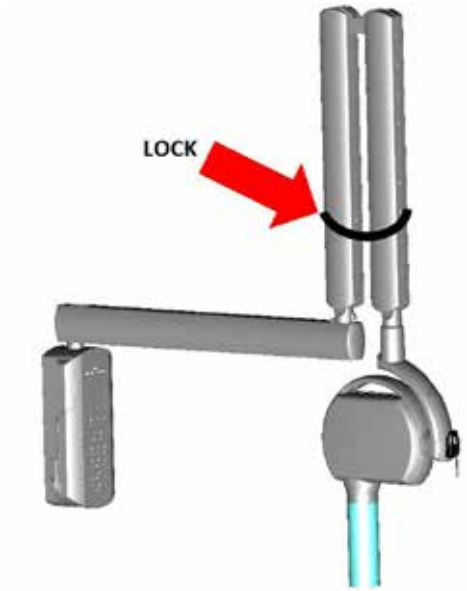
The pre-programmed exposure values and the relevant dosimetric values, including the Dose Area Product, are dependent by the type and dimension of the beam limiting device installed.
Once the cone has been changed it is mandatory to update the internal settings of the x-ray control unit according to the instructions supplied in order to be sure that you're effectively using the same cone type and size indicated on the display of the control unit, otherwise all the pre-programmed exposure settings and relevant dose related information will be completely incorrect!

11.6. HOW TO DISASSEMBLE THE TUBE HEAD

The tubehead can be disassembled only if it is strictly necessary for maintenance or service operations.

⚠ WARNING - ⚠ CAUTION

The scissor arm has not been designed for use without tubehead.
This operation can cause serious injuries to the operator and damages to the device.
It is ABSOLUTELY mandatory to discharge the spring of the arm as described in the chapter "Balancing the scissor arm" on tubehead side or SAFELY block the arms together (as shown below) in order to avoid that the arm suddenly swings up when tubehead is removed.



ASSEMBLY INSTRUCTIONS

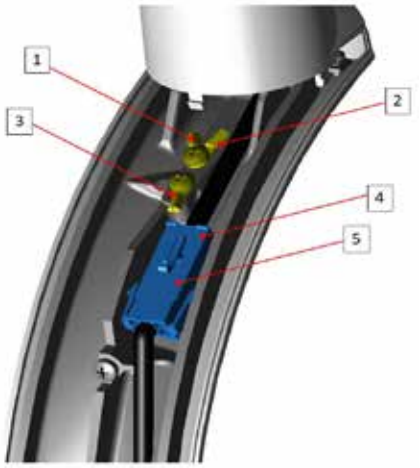
	6. Remove fixing screw located at bottom side of the fork.
 	7. After removed the screw, move back and slide down the bottom cover of the fork.
	9. Remove 3 fixing screws of the fork enclosure.

ASSEMBLY INSTRUCTIONS

10. Remove the fork enclosure.

WARNING - CAUTION

Remember to assemble again the cover of the fork enclosure when re-connecting the tubehead!



11. Disconnect the ground ring (1) and ground ring (2) coming from the scissor arm by unscrewing the fixing screw. Disconnect the ground wire (3) coming from tubehead (3). Disconnect 6 poles connector male (4) and female (5). Make sure that all the cables are free before disassembling the tubehead.

WARNING - CAUTION

Respect the proper assembly sequence of tooth lock washers between each ground protection ring.

12. Lift the fork top cover and if necessary rotate it till have access to the half-moon clip.

ASSEMBLY INSTRUCTIONS

13. Push up the tubehead from the fork and pull out the half-moon clip.

WARNING - CAUTION

Always ascertain that the half-moon clip is properly installed in its site when re-assembling the tubehead!

14. After removing the half-moon clip, pull down the tubehead to disassemble it.
Pay attention that cables are free and not blocked in order to avoid damage them.

11.7. HOW TO RE-ASSEMBLE THE TUBE HEAD

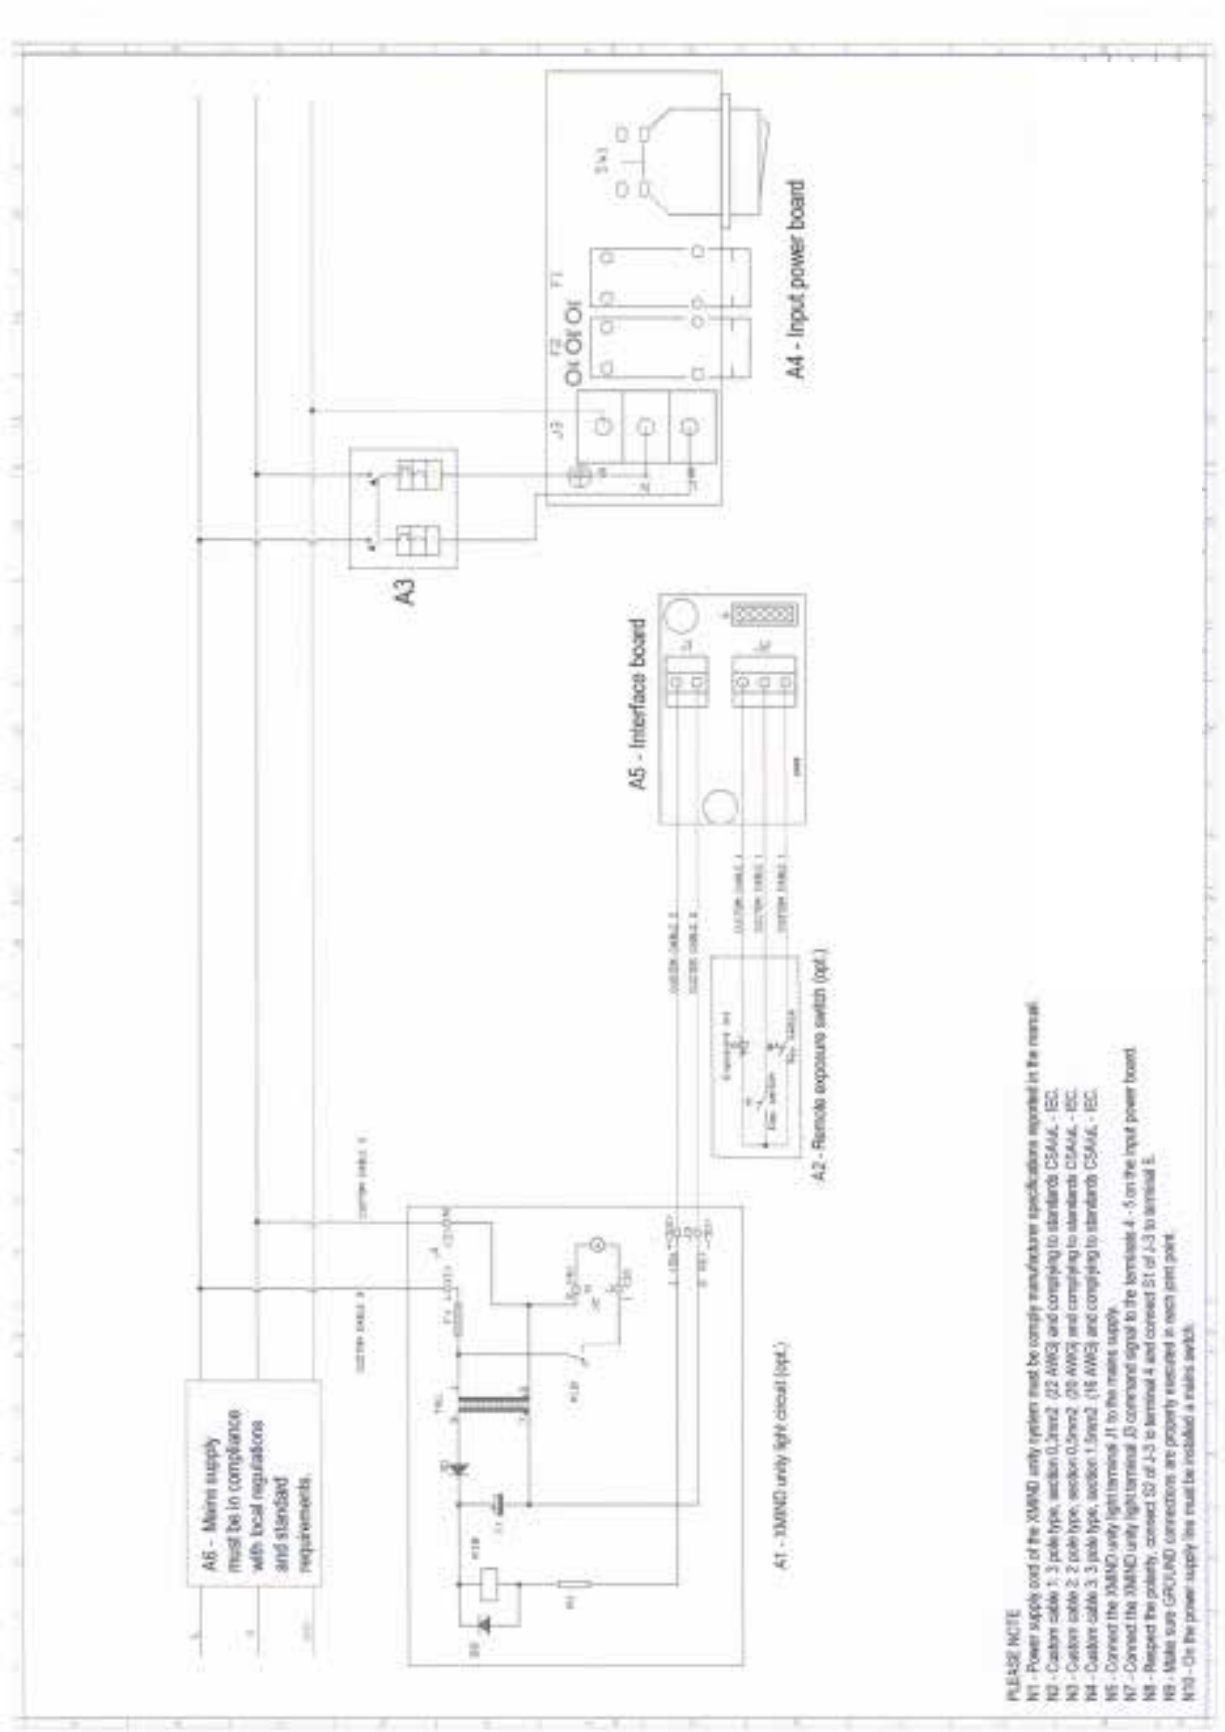
For re-assembling the tubehead, PLEASE FOLLOW INSTRUCTIONS ABOVE IN THE REVERSE WAY AND REMEMBER TO CONNECT AGAIN PROPERLY ALL THE CONNECTIONS.

12 TECHNICAL SPECIFICATIONS

PLEASE NOTE

Refer to Annex A of the Operator's Manual of the Owandy-RX PRO

13 ELECTRICAL SCHEMES



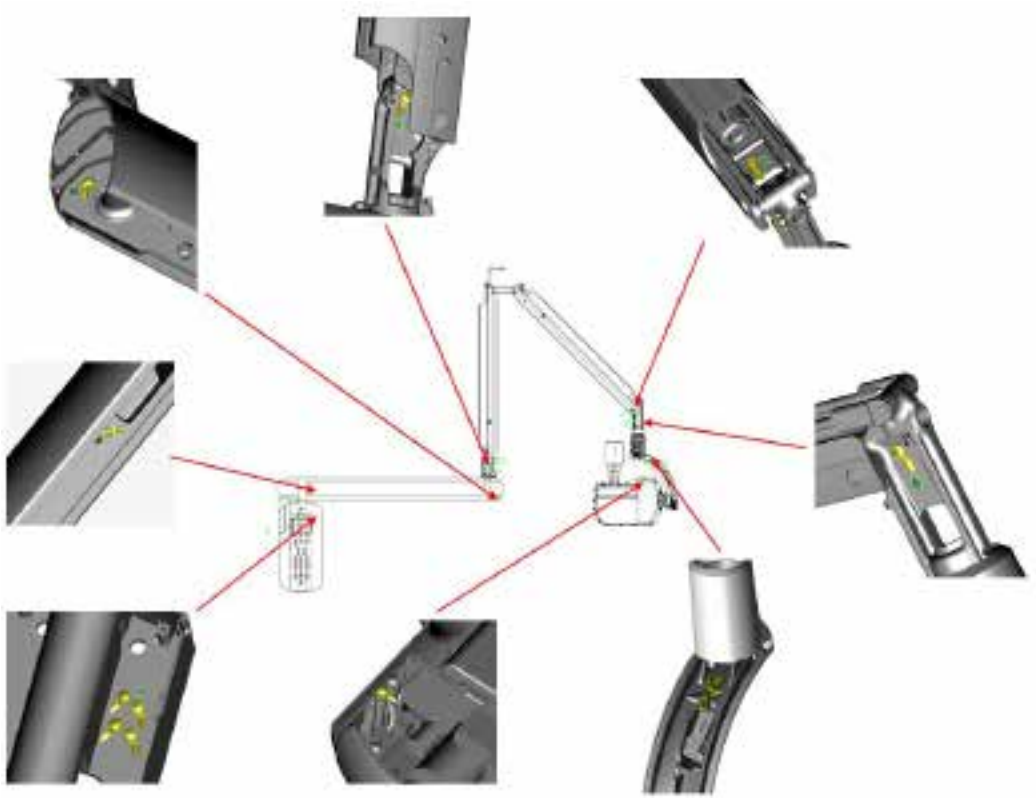
ELECTRICAL SCHEME NOTES

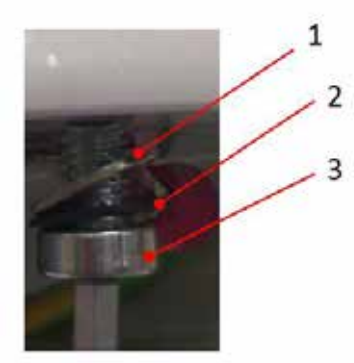
A1	Internal scheme of Owandy-RX PRO light and connections (optional, sold separately)
A2	Internal scheme of Owandy-RX PRO remote exposure switch and connections (optional, sold separately)
A3	Position and connection of bipolar 16A – 250V breaker/differential (Id ≤ 0.03A) switch
A4	Input power board layout and connections
A5	Mains supply must be in compliance with local and standard requirements.

CABLES TYPE AND CONNECTIONS (Max. Length 20 m - 66 feet)

N1	Power supply cord of the Owandy-RX PRO system must be in compliance with manufacturer specifications reported in the manual and with the local regulations of the country of installation.
N2	Custom cable 1: 3 pole type, section 0.3mm2 (24AWG) and compliance to standards CSA/UL - IEC.
N3	Custom cable 2: 2 pole type, section 0.5mm2 (20AWG) and compliance to standards CSA/UL - IEC.
N4	Custom cable 3: 3 pole type, section 1.5mm2 (16AWG) and compliance to standards CSA/UL - IEC.
N5	Connect Owandy-RX PRO light terminal J1 to the mains supply.
N6	Connect Owandy-RX PRO light terminal J3 command signal to the terminals 4 - 5 on the input power board.
N7	Respect polarity, connect S2 of J3 to terminal 4 and connect S1 of J3 to terminal 5.
N8	Always respect polarity of LINE and NEUTRAL.
N9	Make sure GROUND connections are properly executed in each joint point.
N10	On the power supply line must be installed a mains switch able to isolate the unit from the supply mains.

Follow carefully indications reported in the manual and in the scheme, in case of doubt please contact your reference service office. Respect and verify GND routing path indicated below:





1	Ground ring
2	Tooth lock washer
3	Allen key screw
